Yahoo Group Archive: ArizonaScanner (2013 — 2016)

Yahoo Group summary: Arizona public safety radio information

These Yahoo Groups messages were archived in WARC format by ArchiveTeam in 2016. This PDF was generated by Digital Library of Amateur Radio & Communications from the WARC files in 2026.

Date span: 2013-01-03 through 2016-06-13

Source WARC: arizonascanner.w7vZEzO.warc.gz

Source item: https://archive.org/details/yahoo-groups-2016-06-15T09-36-34Z-7a947c

Messages included in this PDF: 908

Message records with no body available in the source archive: 1

Yahoo replaced the domain portions of email addresses with @... in the archived messages. Characters lost in Yahoo's archived text appear as ?.

Messages are presented in ascending Yahoo message-ID order. Gaps indicate records absent from the source WARC or messages omitted from this PDF as spam.

17975. [ArizonaScanner.com] Re: DPS District 9 rebanding

Yahoo group: ArizonaScanner (2013 — 2016)
Date: 2013-01-03 03:58:45 UTC
From: emerveh
Topic: 17919 Message: 17975

So are the freqs different now? What does this mean?

17978. Southwest Airlines Freqs at Sky Harbor

Yahoo group: ArizonaScanner (2013 — 2016)
Date: 2013-01-06 00:37:45 UTC
From: James P
Topic: 17978 Message: 17978

Guys, I am trying to find out what Southwest Airlines is using for operations at Shy Harbor? At one time I was told they were using a rented repeater off of South Mountain, but never got any confirmation. It has to be a repeater. I have sat in the area with the scanner on close call and the only thing I get is America West's 900 repeater. Any thoughts?

Thanks,

Jim

Where is Dan and the people who are the supposed gurus that help produce the book I have purchased year after year. Now this group is full of people like myself asking legit questions but never receive any answers if any that are remotely helpful. It is disappointing to say the least. If you are going to have a group up then why don't' the founders show the passion they once did and at least respond to the members questions. (RANT OFF)

17992. Re: [ArizonaScanner.com] Re: hi

Yahoo group: ArizonaScanner (2013 — 2016)
Date: 2013-01-30 14:32:33 UTC
From: Dan Rollman
Topic: 12675 Message: 17992

All - please do not respond to posts that appear to be SPAM. The other moderators and I take care of it.

For those who do not know, most messages like the one below that appear to be posted by long-time members of this list were not posted at their discretion. Member's email accounts get hacked, and then automated spammers use their email account to send SPAM to everyone in their address book. There's little that list members can do about it other than maintain strong passwords, change them regularly, and change them again when they learn they've been hacked.

Thanks,
Dan Rollman
List Owner

17993. Hacked email

Yahoo group: ArizonaScanner (2013 — 2016)
Date: 2013-02-01 00:45:32 UTC
From: ~Bill
Topic: 17993 Message: 17993

NOT

Most likely the persons On-Line email was hacked

He/She just needs to be made aware of it, and begin to change ALL of their on-line passwords, weekly for the next 3 mo's and move to a stronger password.

Sadly many Yahoogroups are seeing more of these hacks and it is across many online e-mail platforms [ISP's]

Just remember to NOT click on URLS posted blindly and the Moderator/Owner of the list will usually delete the post and place the offender into moderation until the situation is corrected.

Why am I not surprised.
Bean counters drive the system design instead of engineers.
I've seen a number of systems that needed additional sites after buildout.
Including the Maricopa county system.

18006. vhf vs rwc

Yahoo group: ArizonaScanner (2013 — 2016)
Date: 2013-02-18 09:14:35 UTC
From: ja moran
Topic: 18005 Message: 18006

what happened to the VHF frequencies that were used by Tempe PD, Scottsdale PD, Phoenix PD, Phoenix Fire once they moved to the RWC or the 800mhz systems ??

I know 154.19 still carries fire dispatches. I did hear Air-evac on 155.325 this morning while enroute to Laveen from Elfrida.

I think what the Border patrol, DPS, and Cochise sheriff need is a common frequency
so if Highway Patrol/DPS needs something they don't have to ask their dispatcher to relay.
I do hear BP on the Cochise sheriff frequency 155.04 from time to time.

though I do have some of the New Mexico frequencies programmed into the scanner, they are hard to hear due to the Chirachua mountains

AIRS. Arizona Interagency Radio System
<http://www.azpsic.gov/library/airs/>

I have personal knowledge that the SO's. CBP, DEA and every State agency have these frequencies programmed into their radios.

Now, unless there is a specific incident, with a commander, then all requests for assistance MUST go through the officer's primary dispatcher. Otherwise, you'd have everyone on every channel, with no control or assumption of responsibility for officer safety.

CBP uses a frequency that is 168.x (don' have freq memorized) but I occasionally hear them on 155.04, the Cochise sheriff frequency.... CBP is usualy encrypted so it's rare that you hear something on their frequencies

If you are referring to the old VHF channels, then yes there have been changes. Mesa Fire appears to now be using only their 800MHz trunked system for all operations.

From: ja moran
Topic: 18015 Message: 18016

firebird tends to use the same 464 mhz frequencies that are common at many sporting and racing events events between 464.00 and 465.00 464.5, 464.55, 464.75.. 464.3

my uniden scanner has a custom scan built in for racing and searches the common frequencies used at most racing events I also like the railroad search because I prefer Amtrak to the airport TSA noonsense

If I do have to fly, it's more fun to rent a plane and go than to take a flight on an airline...

>
I was in Las Vegas last May and was talking to a Metro PD Sgt downtown on the strip. He said they were using the Open Sky system. He said it worked great down on the strip and downtown, but was crap as soon as you got away from downtown. He said there was very little coverage for the rural areas and resident post officers so they were simulcasting the Rural and Admin channels till further notice.

I have a friend who is a TV new cameraman in Las Vegas and he has talked to numerous officers about the Open Sky system and no one likes it unless they are working the strip. There are many areas in town away from the strip that have virtually no coverage. There are times that officers are using their cell phones to communicate with dispatch.

Not a good situation ..

Mike

The talk groups are there. There is not a list that states Maricopa Police Department. If a person only has talk groups what good are they without frequency's I have tried about every site of frequencys that is in the Radio Reference without any results. It would make more sense to list talk groups and frequency's not just leave a person guessing which one's to use.

Morning all,

Not too long ago, some work was done on a repeater at the fire station in Maricopa. That repeater was 154.220, WPEE264. You might want to give that a listen. Additionally, you might try 151.115, 155.520 (simplex)....

The trunked frequencies are there. At the top of the page you'll see a whole bunch of them. You only need the site that is closest to Maricopa as that is likely the one carrying all of the traffic.

From: John Henry
Topic: 8137 Message: 18026

All of the C-deck talkgroups are now encrypted. Allegedly, this was due to one or more members of the media arriving at the home of the recent workplace shooter, before the police did, putting themselves in potential danger.

Donnie,

Would you happen to have a PL or DCS for the Maricopa repeater on 154.220?

Thanks!

Why would you need that?

Is there a lot of other traffic on the frequency that you need to filter?

The only others licensed on that frequency that you might hear are Avondale
and Goodyear.

Once again, the press ruins if for all of us.

What were they thinking getting there even before the PD? Imagine the outcry if one of them would have gotten shot before the PD arrived.

Well now what you will have to do is file a public information request for every call you hear about. Basically mess up their records and communications staff so bad that they will stop the encryption stuff. The more it costs them to answer all the requests the sooner they will get the point. The media should really do this but they are afraid that the public information officers from the agencies will stop talking to them or have their reporters press passes taken away.

They do charge fees for public records. Audio tapes are $2.75, 911 CDs are $16.50, and they do charge shipping as well, per their website.

I guess it depends on how much you want to know and how much that information is worth to you. They can charge what they want to and take as long as they want to get the information out. We can all thank the feed providers and the media for this mess and like I said before the media should pay for the copies or whatever.
I think we are beating a dead horse. This has been covered by RadioReference over and over again and the conclusion has always been screw the public. If these phone listeners are stupid enough to go to a scene, then they deserve what they got.
 After 50 years of listening to police radio traffic I am going to listen to the Fire Dept. until they encrypt that.

You can still listen to the dispatch talkgroups.
They're encrypting the 'hot call' talkgroups.

WalterH

PS: This is the same discussion that occurred when pd's went first to
voice-inversion scrambling, then trunking, and then digital voice.

18039. police an encryption

Yahoo group: ArizonaScanner (2013 — 2016)
Date: 2013-03-10 01:29:56 UTC
From: ja moran
Topic: 8137 Message: 18039

when police encrypt their communications, while they may protect some information deemed sensitive from quickly becoming public... the info eventually will be public at some point. If the subject of the investigation goes to trial info from the trial generally is public record.

I've heard stuff on the scanner and knew it was not wise to disclose that, but other times I have heard an agency looking for someone or something and came across the person or vehicle and called their dispatch. I've been on I-10 and someone called the highway patrol that was broken down (code 34) they were unsure of where they were. I found the person, got a good location, then gave that to the dispatch.
The key is to be a good citizen and know when and when not to act on the info you are hearing.

What is happening is often new media will hear something on their scanners and they want to be the first to get the story. The problem is that being first does not always mean they are right. I never believe something from a source that reports it first, I need to hear it from a few other news outlets. Often each will tell the story slightly differently. One says 20 people were injured, another 30.

I took journalism classes in highs school and was taught that it is important to get the story right.. don't be the first to report the story, but be the first to get the story right, be accurate, be thorough

Some agencies like the US Border patrol (CBP or customs and border protection) generally encrypt their communications. They don't want some smugglers or illegals knowing the agents locations or intentions.
When there are incidents like forest or wild fires, you will find the border patrol sheriff, and forest service on common frequencies coordianting activities. the info on the common or interagency frequencies is not encrypted.

I don't think every transmission or conversation in most cases should be encrypted
Citizens who hear something on their scanners can be the agencies eyes and ears.

I too passed a bad rollover crash on I-10. There was confusion on the radio about where the crash actually was. I have a GPS (Delorme GPS software) on my laptop. As I passed the crash, I took note of exactly where it was and gave that to the highway patrol dispatch. Enough people had stopped that I did not need to add to the confusion.

I notice that in both of these cases, it's the Highway Patrol that's being monitored.

Does anyone have similar stories while listening to county/municipal agencies?

18044. Re: [ArizonaScanner.com] police and encryption not always good

Yahoo group: ArizonaScanner (2013 — 2016)
Date: 2013-03-14 00:10:31 UTC
From: dave
Topic: 8137 Message: 18044

Nearly 5 years ago, while working for the City of Glendale and monitoring Glendale PD, I listened to a purse snatch call at the Sprouts at 51st Ave and Peoria Ave. I noted the description of the suspects and their vehicle. A short time later a co-worker who knew I monitored police and fire called to ask if I had heard the dispatch, because the victim was the wife of another co-worker. His wifes arm was broken during the attack. I provided him with the info that was broadcast. Within the half hour my ears perked up when a 2nd purse snatch call came out at the bowling alley at 59th Ave North of Bell Rd. This time a plate number was provided. I called my co-worker back and gave him the updated information, adding that it matched the incident at 51st & Peoria. Ten minutes later he's calling me back to confirm the license plate number I had just given him. It matched the vehicle in front of him in traffic at 67th & Peoria. I advised him to hang up on me, call G.P.D. and try to keep the vehicle in sight. Glendale and Peoria responded when the vehicle went West into Peoria. The suspects bailed but were eventually caught. Purse and contents returned. I used this incident as a reason not to encrypt when Glendale decided to, but the Chief at the time stated that they were proceeding due to officer safety concerns and privacy issues.

I notice that in both of these cases, it's the Highway Patrol that's being monitored.

Does anyone have similar stories while listening to county/municipal agencies?

watch this
by having the communicaitons out where they can be monitored the citizens can assist the police

by encrypting the police will become ineffective then will use that as a corner stone to their arguement for more money
we can't respond, we need more officers, more money

I say work smarter not harder... make govt do the same do more w less

18055. Arizona Civil Air Patrol Repeater Information and Map - 2012

Yahoo group: ArizonaScanner (2013 — 2016)
Date: 2013-03-23 05:00:02 UTC
From: Brian
Topic: 18055 Message: 18055

Forward. Since can't upload the files to the ArizonaScanner Group :(

Updated Arizona Civil Air Patrol Information and Map 2012

Arizona Civil Air Patrol Repeater Plan
Arizona-CivilAirPatrol-Emergency-Plan.pdf
Arizona Civil Air Patrol Repeater Map (Available in the Photo area)
<http://groups.yahoo.com/group/ArizonaFedCom/photos/album/724077689/pic/list>

For many other Civil Air Patrol Wing States. You can download the other 40+ files.
Download available on the file page.
<http://groups.yahoo.com/group/ArizonaFedCom/files/Civil-Air-Patrol-2012/>

* Arizona Civil Air Patrol VHF Repeaters:
VHF Designators - The primary Arizona Wing simplex and repeater channels are listed below. These are analog designators. These are also used in digital (P25) mode by adding a P to the end of
the designator.
R33 Towers Mt
R49 MT Ord
R56 MT Lemmon
R46 MT Elden
R18 White Tanks
R44 Greens Peak
R48 Squaw Peak
R31 Lake Havasu
R16 Mule Mtn
R34 Yuma
R13 Ajo
R38 Kingman

Civil Air Patrol Wiki Repeater Page
<http://wiki.radioreference.com/index.php/Civil_Air_Patrol>

* HF FREQUENCIES: The Arizona Wing normally utilizes the Southwest Region Primary frequencies of: 4627 kHz and 7612 kHz USB for HF operations. Other HF frequencies available to Southwest Region are as follows: (all frequencies are USB)

* FIXED FACILITIES: PHOENIX
All of the Phoenix Communications facilities are equipped with CAP VHF FM, VHF AM, and HF SSB. All have VHF FM antennas sufficient to establish contact through three repeater stations: Towers Mt., Mt. Ord, and Mt. Lemmon. This gives them the ability to contact fixed, mobile and aircraft stations throughout central and southeastern Arizona.

* FIXED FACILITIES: TUCSON:
The Tucson Communications facility is equipped with CAP VHF FM, VHF AM, and HF SSB. It has VHF FM antennas sufficient to establish contact through two repeater stations: Mt. Ord, and Mt. Lemmon. This gives them the ability to contact fixed, mobile and aircraft stations in southeastern Arizona.
It is anticipated that this facility will be activated whenever communications are required in its coverage area, i.e., southeastern Arizona.

* FIXED FACILITIES: Payson, Prescott and Lake Havasu
These Communications facilities are equipped with CAP VHF FM, VHF AM, and HF SSB. All have VHF FM antennas sufficient to establish contact through one or more repeater stations..
It is anticipated that this facility will be activated whenever communications are required in its coverage area, i.e., northcentral Arizona.

* PORTABLE FACILITIES:
Arizona Wing has four Tactical Repeaters. These repeaters may be deployed as either airborne or ground repeaters. Three of the repeaters are located with class cockpit Cessna 182 aircraft at Payson, Tucson, and Goodyear airports. The fourth is located in Phoenix and is available for ground deployment. Arizona also has two mobile mission command post trailers. These are fully equipped with dual VHF/FM, HF/ALE, and VHF/AM radios and maybe deployed statewide.

* G. The Central Valleys of Arizona
encompass the cities of Phoenix and Tucson, as well as extensive urban development and agriculture. These valleys are seldom the subject of search missions, however, they are often used for search training, cadet activities and Wing activities which require use of the VHF-FM repeater system.
The Phoenix area is characterized as having overlapping coverage from a number of repeater sites, including White Tanks, Towers Mt., Squaw Peak, Mt. Ord and Mt. Lemmon. While this coverage may seem excessive, in actuality each repeater serves to extend the coverage of Phoenix-area mission bases outward in various directions, and the overlapping coverage is a result of this necessity.
Communications planners for this area must therefore determine which of the available repeaters provides the most suitable coverage for their mission, and ensure that their deployed units are properly briefed so that they use the correct repeater. It is for this
reason that Arizona Wing requires that the repeater being used be verbally identified during the initial call, so that that called party can respond on the correct repeater. Numerous cases of conversations taking place through multiple repeaters have occurred, and this can be very confusing to operators who hear only one part of the conversation! For missions where multiple repeaters are needed, this becomes particularly important.

* A. The Grand Canyon Region
is an area encompassing some 50,000 square kilometers between Page, AZ, on the northeast corner, Flagstaff, AZ on the southeast corner, Kingman, AZ on the southwest corner and St. George, UT on the northwest corner. The region is particularly isolated, with some areas so rugged and isolated that they have never been fully explored on the ground! The area north of the Grand Canyon itself is densely forested, with many deep side canyons and ravines, while the area south of the canyon, while relatively flat, is sparsely populated, with few roads. The only areas of relatively dense population within the region are the cities comprising its corners and the Grand Canyon National Park

Village, located at the approximate center of the region. Historically, air searches here have primarily been in the area of the Grand Canyon itself, due to sight-seeing activity, and on the high plateau north of the National Park, due to the air routes crossing it. VHF communications in this area is difficult, due both to the generally high terrain (5000-7000 ft. MSL) and the lack of accessible mountain peaks to locate repeaters and other equipment. For a deployed unit (including aircraft) deep in some of the canyons, the only possibility of VHF communication would be with an aircraft or satellite nearly directly overhead.
Currently, this area is not well covered well at all, with the only fixed repeater site located on Mount Elden (5 miles North of Flagstaff, AZ). The Mt. Elden repeater covers the Southern and Eastern edges of the area for search aircraft, but does not cover the center of the area, due to blockage from Mt. Humphries. For ground units, Mt. Elden is only accessible from these same "edge" areas.

* F. The Colorado River Valley,
comprising the entire western border of Arizona, is an area of intense interest to the Arizona Department of Emergency Management, due to the risk of flooding in this region. In addition, increasing air travel to and from the resort communities located along the river have significantly increased the amount of CAP air search activity in this area. The region is approximately 400 km. long, and while most areas of interest do not extend more than 10-15 km. on either side of the river itself, there are several side drainage valleys that may become of interest in a disaster scenario. There are a number of smaller towns located along the river and highways both along the river and crossing it at several points, however, in a flooding disaster, these roads and bridges may not be usable. The region is likely to be significantly isolated under these conditions. Communications difficulties in this region include a relative lack of suitable high-level communication sites, and its distance from Phoenix and Tucson, especially the State Emergency Operations Center located in Phoenix.
Starting at the southern end at Yuma, AZ, the Yuma repeater provides coverage to approximately Cibola, AZ. From this point to Parker, AZ, coverage is limited to occasional "spots" which allow access to repeaters located well east of the river, such as Towers Mt. and White Tanks. Fortunately, relatively low terrain elevations allows reasonable coverage from these central repeaters for aircraft at altitudes above 5000 ft. Ground coverage in this area is extremely limited.
Beginning at Parker, AZ, coverage is provided by first the Crossman Peak ("Havasu") repeater, then the Hualapai Mt. ("Kingman") repeater. Both of these repeaters can be accessed from the Lake Havasu airport Mission Base and also other facilities in the area. The Hualapai Mt. repeater covers to approximately the northern end of Lake Mojave. From this point to Boulder Dam, Arizona does not have any repeater coverage, however, Nevada Wing CAP operates a repeater on Mt. Potosi, in the vicinity of Las Vegas, that may provide coverage.

* E. The U.S./Mexican Border
is not normally an area involved in air searches, due to the limited air traffic across it; however, Arizona Wing conducts many mission both along and across the border in support of other Federal agencies on a variety of missions. From Nogales to Yuma the border is an extremely isolated region, with little habitation or access, and large portions
are in restricted airspace, due to Air Force bombing and gunnery ranges.
Communication with low-flying aircraft in this region is difficult at best, due to both the lack of suitable ground facilities and the large distance to the nearest metropolitan area.

From the Southeast corner of Arizona west to the Baboquivari Mountains, coverage by both the Mule Mt and Mt Lemmon repeaters is adequate, with some shadows caused by high mountains. West of the Baboquivari Mountains, the Ajo repeater covers the Goldwater range and provides coverage until reaching a point approximately 50 miles east of San Luis, where coverage from the Yuma (Telegraph Pass) repeater begins. Note that only a Mission Base in the Yuma area will be able to access the Yuma repeater.

* D. Southern Arizona
is sparsely populated, and quite rugged in many areas, with high mountains making up a significant percentage of the terrain. The terrain is generally more open and not as rugged as the Northern Arizona areas, and is only forested at higher elevations, such as on Mt. Graham near Safford, the Santa Catalina mountains north of Tucson, and the Chiricahua mountains in extreme southeastern Arizona. While a number of high mountain communications sites are located in or near the eastern end of this region, extreme ruggedness contributes to significant communication problems in some areas.
The Mule Mt. Repeater, located just west of Bisbee, AZ offers the best coverage of extreme southeastern Arizona, although it is also obscured in parts of the Chiricahua Mountains, particularly for ground units. It provides excellent coverage of the area south of Interstate 10 West to the area of Mule Mt., and, for aircraft at search altitudes, to well
West of Nogales, AZ. Mission Bases in Tucson can access the Mule Mt. Repeater, as well as Sierra Vista and Douglas/Bisbee.
The Mt. Lemmon repeater offers coverage of the area for search aircraft south of Interstate 10 from Tombstone to approximately the edge of the Tohono O'odham Indian Reservation (also the Baboquivari Mountains) west of SR 286. The Mt. Lemmon repeater is very useful as it is easily accessed from Mission Bases in both Tucson and Phoenix. There are some shadow zones behind mountains such as Mt. Hopkins and Mule Mt. that will interrupt coverage for aircraft at search altitudes.

* C. The Mogollon Rim Region
is somewhat smaller than the first two areas, but presents some special concerns. This region is an area of steeply rising terrain extending about 300 km. from Williams, AZ southeast to Payson, AZ, then east to Alpine, AZ, with a width of approximately 60-km. It is best characterized as the edge of an ancient geological uplift, with a high, arid plateau
to the north and east and low desert region to the south and west. The region is almost completely forested, rising from dense chaparral at the lower, southern edge, to heavy pine forests at the top of the rise, to rapidly desiccating high plateau beyond this "edge".
There are a number of major roads through this region, and several small cities, such as Prescott and Flagstaff, as well as a number of towns and villages. This area is not nearly as isolated as northern Arizona, but is often subject to air search, not only due to the large
number of air routes across it, but also due to the violent inclement weather often experienced in this area of intense orographic lifting. The dense forestation adds to the difficulty of air search, as does the often steep and rugged terrain. VHF coverage of this region is generally good, due to a number of high mountain radio relay sites distributed along its length, however, low-level and ground coverage is often compromised by the rugged terrain.
Starting at the eastern end, coverage is provided by the Greens Peak repeater, which provides excellent coverage for aircraft at search altitude from well within New Mexico to

the approximate center of the region. The primary problem experienced in using this repeater is that only Mission Bases located at Show Low, Springerville, Alpine and other "high country" airports can access it. For ground units, particularly handhelds, coverage in some areas can be difficult, due to the rugged terrain. Any activity involving ground units should be prepared to provide additional relay points to augment communications. The western end of this area is covered by both the Mt. Elden and Mt. Ord repeaters, and is limited for ground units only in the deeper terrain and canyons. The Mt. Ord repeater has the advantage of providing coverage into the Phoenix metropolitan area, as well as being accessible from the Deer Valley Mission Base. The Mt. Elden repeater, while not accessible from Phoenix, is easily accessed from the Flagstaff area and airport.

* B. The Northeast Corner of Arizona
is also very isolated, but does not have the extreme depths of terrain that distinguish the Grand Canyon region. This area, approximately 200 kilometers square, is composed primarily of broad, high valleys and plateaus, with isolated settlements and large areas of trackless "wild land", separated by rugged mountain ranges. There is limited forestation in the area with the exception of Navajo Mt about 35 km. east of Page, AZ, the Chuska Mts. in the extreme northeast, the Piney Hill area immediately west of Window Rock, AZ, and the Black Mesa area southwest of Kayenta, AZ. The northernmost part of this area has been the most subject to search, due to several air routes here that lead toward Colorado and Northern New Mexico. VHF communication here is somewhat easier, due to the less rugged terrain, but the vast area encompassed, combined with the lack of suitable Mission Base locations means that deployed search units will likely be a long distance from their base. High mountains with access and facilities for installing radio equipment are also few and far between. In the winter months, mud and snow can significantly impede ground access into much of the area.
This area is also not well covered by fixed repeater sites. The Mt. Elden repeater covers the southwest portion of this area quite well for both air and ground vehicles, and the Greens Peak repeater provides good coverage for aircraft at search altitudes in the southeast portion. Coverage for ground units east of Winslow, AZ is limited, particularly for those shadowed by terrain to their south. A search utilizing ground assets in this area will require either airborne or additional ground relay assistance.

It should be no problem for ANY of the p25 capable scanners to demodulate a p25 transmission from ham radio. They are non trunked and usually quite strong signals unlike the simulcast issues that scanners have with many trimmed systems.

18070. Fire Season Scanner Feed.

Yahoo group: ArizonaScanner (2013 — 2016)
Date: 2013-04-23 21:26:13 UTC
From: Ranger
Topic: 18070 Message: 18070

Tonto NF , Arizona Dispatch Center is Phoenix not Tonto Dispatch.
http://www.broadcastify.com/listen/feed/13913
towers are up rain or shine 9 am till 5 pm daily . If there is an active fire - lookouts may go up earlier or stay up later.
I am using a pro197 scanner with a Diamond all frequency antenna with LMR300 coax cable. The frequency mode is NFM not fm. Very dry out here any everything is brown. The lookouts are up 3 weeks early. During a fire if anyone should get a air to air or air to ground frequencies please let me know so I can add them. These frequencies change yearly so if anyone knows anyone on the forest can you get the radio plan. Thanks . The scanner is hooked up to a old gateway tower. Also on the feed is the AZ game wardens.

Hello everyone,

I was at DQ the other day at Bell Rd just west of the 51 fwy.

I noticed every employee had headsets on.. I figured it would only be the drive through person..

I am wondering what the freq's are for these places where all the employee's have head sets.. I am guessing UHF?

Anyone ever ease drop on these guys? If so what did you hear?

Jeff

From: Ranger
Topic: 18077 Message: 18077

You would think after the years that the forest service would have received a grant to get working repeaters. Every year the Humboldt repeaters goes down, Again this morning the crews are working the Cactus fire on the Cave Creek district and can not reach dispatch, The fire is about 2 miles from the fire. What does it take to get working repeaters. I left the district in 2006 and always had problems with the radio system.

It's been years since I mapped out the local fast food drive through frequencies. Your best bet is to use the close call feature, if your scanner has one, or the search feature if it doesn't. Try the 455-460 and 465-470 ranges to start with.

What I have to do at work is boot my laptop, THEN plug in my adapter.
Usually comes up as Com1 if I do that.
If I boot with it plugged in, it comes up as some higher number, usually 7
or 9

If that doesn't work, then go back into device manager and change the
USB/serial adapter to com3.

John Henry;

Yes, District 3 has 2, distinct RF frequencies. One for I40 and south [D3S], and one for everything north of I40 [D3N].

District 1, on the other hand, is separated by different PL's, but the same RF frequency.

Check out the district maps on the group's webpage.

Subject: Re: [ArizonaScanner.com] old style usb scanner pc interface cable

What I have to do at work is boot my laptop, THEN plug in my adapter.

Usually comes up as Com1 if I do that.

If I boot with it plugged in, it comes up as some higher number, usually 7

or 9

If that doesn't work, then go back into device manager and change the

USB/serial adapter to com3.

Subject: [ArizonaScanner.com] Re: Fast food freq's?

It's been years since I mapped out the local fast food drive through frequencies. Your best bet is to use the close call feature, if your scanner has one, or the search feature if it doesn't. Try the 455-460 and 465-470 ranges to start with.

yes 460.3000 for the rest of the district and nav2 for far he Az north of I-40.this is the only district in Az where they have split frequencies in the same district. Many yes ago the then d13 now metro east was doing that because of interference from d4.d12 for a time in the 80s kept changing towers and was dispatched by Phx.butt the attempt failed.

Can someone post the tones and coverage areas for D1?

Walter, the maps I can find in the files section are dated early 2000's and don't show the divided districts??

18103. [ArizonaScanner.com] Re: DPS District 1 and District 3 questions

Yahoo group: ArizonaScanner (2013 — 2016)
Date: 2013-05-24 19:50:23 UTC
From: joebadura
Topic: 18085 Message: 18103

This thread has gotten a little confusing, so I will summarize with what I have learned here and on the similar Radio Reference thread:

District 1
460.475 151.4 PL - D1 Arizona Strip
460.475 100.0 PL - D1 outside Arizona Strip

District 3
460.325 100.0 PL - D3 North of I-40
460.300 100.0 PL - D3 I-40 and South

If anyone can confirm the accuracy of this, I will submit to the RR DB.

Best Regards,

Joe

18104. Loggings at Comicon 2013, Phoenix...

Yahoo group: ArizonaScanner (2013 — 2016)
Date: 2013-05-25 20:09:30 UTC
From: kb7aqd Homuth
Topic: 18104 Message: 18104

Rig: IC-U82
Antenna: Radio Shack Race stub and Smiley 440 whip.

I programmed all GMRS/FRS freqs as well as the 54 standard Motorola UHF business channels. Vendors, security, and visitors pretty much used all 22 FRS/GMRS channels.

Here's some of the hits I logged...
461.0375 461.0625 461.0875 461.1375 461.1875 461.3625 464.4875 464.500 464.5125

466.0625 466.1625 466.3375 467.7625 467.8125 469.4875

and every channel from 467.850-467.925 MHz

These are clear voice comms, as I didn't log pagers, data, nor P25.

Around 6:00 PM, the security base warned guards of the "zombie walk" on 457.3375 MHz. I could hear this from the 19th Avenue and Bethany Home Road area, so they must have a good antenna location.

Also made a simplex contact from the convention center to a visitor at Sky Harbor with an "N2" call on 446.050 MHz, but we couldn't quite work each other.

Wore an ARA, "Amateur Radio Emergency Communications" yellow shirt with black pants. Many visitors, including costumed fans asked me for directions. Best costume ever!

18105. Capitol Mall to DPS patch...

Yahoo group: ArizonaScanner (2013 — 2016)
Date: 2013-05-25 20:13:08 UTC
From: kb7aqd Homuth
Topic: 18105 Message: 18105

I found one 460 MHz split with good signals...

460.4125 PL 127.3

Most of the time, it's Capitol Mall police, but sometimes dispatch patches traffic along US 60. Much better signal across Phoenix than the former 150.995 MHz, including out to 35th Avenue and Pinnacle Peak.

'Capitol Police' are now a new DPS 'District' and are dispatched from DPS HQ.
That means that they may be cross-patched with just about any other central area channel [Metro East, West, Central, D11, State] depending on dispatcher availability/workload.

Subject: [ArizonaScanner.com] Re: 173-174 MHz non-federal....

I thought one might have been a tow company due to one transmission about going to the command post, and that fire was on-scene (I was thinkg an accident scene). But Southwest Gas would make more sense. Are they using an LTR system, or regular repeaters?

Hi Roy,

Thanks for the reply. I'm in Tucson and would like to scan a group of 5 frequencies in the 453 to 460 range.

Take a look at this site: http://marksscanners.com/346XT/346xt.shtml

The info there should make it much easier to understand. If that doesn't, there is a scanner group in Tucson that meets on the East side I think that would be able to help. I'm in Chandler, or I would be happy to have you stop by and I would help you directly,

If your 346XT came with a computer cable you might also want to take a look at ProScan. It is an AWESOME programming package that works on a ton of the Uniden scanners and they have a 30 day free trial too. www,proscan.org

18128. speech inversion Douglas

Yahoo group: ArizonaScanner (2013 — 2016)
Date: 2013-06-08 03:41:16 UTC
From: ja moran
Topic: 18020 Message: 18128

I am down on my farm near Elfrida (on hwy 191 north of mile 28) nd about 30 miles north of Douglas and the Mexico border...

My Uniden radio that I have sitting on a shelf above my laptop picked up what sounded like the old speech inversion scrambling on about 459 mhz

anyone have any idea what this might be

Cochise Sheriff is 155.04 or 453.85 and CBP (Customs and Border Protection, Border Patrol are on 165-170 mhz frequencies but they are nearly always encrypted

last weekend, I had two mexicans come to my gate tired and confused they did not understand English or German but did know how to say "Border patrol. I called BP and they got a free ride back and were fed too at our (us tax payer) expense...

Is it possible it was 462 or 467?
There are/were a number of FRS units [Kenwood is one] that had voice
inversion as an available programming choice.
Or, it could be the bad guys.
They use radios too and have even hijacked public safety repeaters to
coordinate their activities.

18130. speech inversion Douglas

Yahoo group: ArizonaScanner (2013 — 2016)
Date: 2013-06-08 16:09:27 UTC
From: ~Bill
Topic: 18020 Message: 18130

There are plenty of business frequencies, I have run across during travels
that use Encryption too

a.) Basic Speech Inversion

b.) Rolling Code Speech Inversion [periodic click as code changes] - NFL
used that before MotoTRBO

c.) DVP/DES

d.) Now P25 and P25/ENC

e.) and the MotoTRBO

Without knowing the specific frequency it is hard to help more than this.

Afternoon
John,

As others have mentioned, when you couple that freq range, with speech inversion, your more than likely looking at "them folks that bring the tamales across".... i.e. BAD Guys!... don't take a page from the "Barnett Play Book" and go looking for them, your likely to only find trouble!

DPS does not link their UHF channels to the YRCS full-time. So, you will not hear them all the time. I do not know what conditions have to be met to have the link established.

ADOT Enforcement, which I've not heard of until now, or MVD Enforcement, which has been around for years?
154.905 and 156.120 are the old VHF MVD Enforcement channels.

Earlier, I only listed the ADOT & DPS TG's I can confirm hearing.

ADOT Enforcement and MVD Enforcement are the same group, just a new name. All of ADOT from Phoenix to the southern border have moved to the 700 MHz trunked radio system that is currently using the Yuma central controller. DPS ix also simulcasting several of it's UHF channels on the system. The plan is fof ADOT to purchase it's own controller in the near future, to allow statewide expansion.

Not necessarily John. Sometimes the TG is configured as encryption optional and each user can choose to encrypt. Or not. You can hear this on the MCSO TRS on the SIDx TGs...sometimes half of a conversation between two units is encrypted and half is not.

Fuels and Fire Behavior Advisory
Arizona and New Mexico
June 16th 2013
Subject: Persistent multi-year drought across much of New Mexico and Arizona has dropped fuel moistures to critically low levels in the large dead and live foliar fuels. These critically low fuel moistures increase available fuel loading which contributes to and supports active crown fire in timber fuels when critical fire weather is present.
Discussion: The multi-year drought has reduced the fine fuel loading across most of the region so the focus for this advisory will be the timber fuels within the region.
Difference from normal conditions: Drought creates more available fuel in timber fuel types which will increase fire intensities, crown fire potential and difficulty of control for fire suppression resources. Short duration rain events provide only short term fuel moisture improvement in timber litter fuels (1, 10, and 100 hour dead fuels). Fuels rebound quickly to previous dryness levels. Short duration rain events provide no fuel moisture recovery in large dead and live foliar fuels.
Concerns to Firefighters and the Public:
☐h Surface fire will quickly transition to crown fire and only requires low to moderate surface fire intensity to transition.
☐h Active/running crown fire has produced long range spotting up to one mile under the influence of an unstable atmosphere.
☐h Active fire behavior can extend well into night and early morning hours even with moderate RH recovery.
☐h Thunderstorm activity will create a mosaic pattern of surface fuel moistures. Surface fire intensity and fire behavior may change abruptly when fires cross these boundaries of moist and dry surface fuels.
Mitigation Measures:
☐h Local briefings need to be thorough and highlight specific fire environment conditions. These include but are not limited to local weather forecasts, Pocket Cards, ERC¡¦s, live and dead fuel moistures, and special fuel conditions such as drought and insect mortality
☐h Lookouts, both on the ground and in the air, can help identify the initiation and location of crown fire. They can also provide the location of resultant spot fires from active crown fire.
☐h Firefighters should acknowledge that fire growth and fire behavior they encounter this year may exceed anything they have experienced before due to the drought factor. Normal strategies

usually with a decent antenna you can get the fire communications from a good distance.
try some of these
168.66250
166.55000
167.11250
168.23750
168.35000
163.10000
168.61250
163.71250
415.32500
167.60000
166.87500
167.50000
169.11250
167.47500
168.63750
168.48750
167.47500
172.27500

technology is nice when it works!

Need some help here. can anyone explain to me how to program the system that Avondale PD is now apart of? I thought it was Glendale system. I have tried to program the phoenix system in and it kinda works. every 3 words garbels out into mush and it sucks. I just dont get the hang of it. I am going over to HRO now to by the newest southwest book and hope there is info in it other then general info. I have programmed my scanner 200 times and get none of avondale police. Phoenix comes in terrible and its better listening to the 50 radio app or stream off radio ref but i like to lock in the channel...

I guess in a nut shell if anyone is kind enough that is a pro I could chat with for 15 mins and get the jist of it? Please respond to email hell at this point I may just pay for a tutor on here who is an expert in programming these systems..

Thanks in advance!

chris

According to Radio Reference, Avondale has one talkgroup on the RWC system: 4499. What control channels are you trying to program? You can't just pick any one on the RWC system because Avondale won't be associated with all of them. Looking at the RWC system on Radio Reference (http://www.radioreference.com/apps/db/?sid=2508), I would guess Simulcast G (since it's listed for West Valley) would be the site to program for control channels for Avondale. I'm in the East Valley so I don't know for sure but that would be a start.

From: Craig 'Lumpy' Lemke
Topic: 18175 Message: 18175

Coppers, fire doggies, parameatheads -

I sometimes listen to online scanners from systems that include a tone burst CHIRP at the beginning of each transmission. It becomes annoying as heck very quickly.

Does that burst get filtered out in the commercial radios in your units or are you forced to endure a shift filled with the audio icepick?

Same question for dispatch. Is the chirp filtered on your console?

Thanks -

Craig 'Lumpy' Lemke

From: Walter Howard
Topic: 18175 Message: 18176

Depends on how the system is setup.

If it's a trunked system, that burst says who is transmitting, and what
talkgroup they want to communicate on. That information is NOT passed along.
If it's a 'conventional' system with no consoles, it's usually sent without
the necessary PL/CTCSS to open the squelch on another radio.
In a system with consoles., the decoder strips the "audio icepick" before
sending the audio along.

Unless an 11th edition has been published, the "newest" SWFD is 4 years old. It doesn't even have Simulcast G of the RWC in it, and the Avondale listing shows their old UHF PD channel, and some city service TG's on Maricopa County's system.

There are some updates available through their website. Simulcast G is
there but nothing about Avondale. There's also a request for updates to
be sent to updates@... <mailto:updates@...>

Thanks for the reply, I did go to HRO and they showed me the 4 year old book. No help. They even told me not to buy it lol. I went on Radio Reference programmed in the G freqs, first tried just the blue and red channels and then everyone in G. Also programmed in the 4499 talk group listed. Not one radio transmission. I hit scan and it wouldn't pick up anything not even static with squelch all the way down. I am located near 43rd and cactus where another radio reference guy listed he hears it just fine (says you need to be near the tower)?? I must be doing something wrong or my scanner is a POS? Using the pro 96.

Thank you guys for all your input I am still very frustrated with this and still don't understand why I cant get that city of avondale in nor why phoenix pd systems only hear every 4th word sounds like a digital scrambled blurbs (not trying to listen to encrypted channels either)

I compare this to radio reference feeds of the same channel.. There quality is far less garbled then mine. I do still hear garbled traffic and it seems like only at the most inconvenient times!

If anyone is near 83rd and Glendale and programs in the west G simulcast please let me know if you can catch traffic on 4499 and what scanner you use.

Thanks again!

It wasn't so much the rebanding, but they added a bunch of 700 MHz channels that the Pro96 [and the Pro2096 which is the same unit in a different package] don't cover.

He's using an older scanner that won't track the 700MHz frequencies of Simulcast G or the White Tanks IR, so that won't help him. He needs a newer scanner.
And, I doubt an 11th edition of the SWFD will be published, for several reasons.

What rebanding are you referring to? They haven't rebanded from 866-869 down to 851-854 yet. The negotiations with Mexico, to allow the Southwestern states to do it, only recently concluded. And that's the only rebanding that I'm aware of.

Some would consider the move to 700 MHz a form of rebanding. While not technically correct, it is sort of another band. :)

Topic: 18196 Message: 18196

I don't listen to Phoenix PD often but I don't recall hearing HOT traffic being dispatched on the district channels anymore.

Since they encrypted the HOT traffic (thanks local media) is the initial HOT traffic dispatch on the district channels encrypted so we don't hear it?

From: ja moran
Topic: 18196 Message: 18198

In southeastern Arizona, Cochise County, monitoring the sheriff on 155.04 and 453.85 got easier. They recently installed some new repeaters. I believe one is up on Dragoon Mountain beside I-10 at about Mile 318 because when I go through that area, the Close call feature on my Uniden scanner will pop in the Cochise Sheriff frequency... or the 449.7 ham repeater

DPS 460.325 (Dist 9) comes in clear in most areas. from Elfrida you can hear traffic from all over Cochise and Graham county

Hello everyone I found something interesting.
I had left my scanner with the Payson "Bank" selected.
I turned on the scanner to listen to Scottsdale Airport. I heard what sounded like the old Medcom stuff on 155.325.
(one of the freq's that is used for police or sheriff up in Payson.) They were reporting an 82 y/o man and his condition etc. and also gave an ETA to the hospital.. anyone know about this?

Hello - I will be visiting the Grand Canyon (west, south and north rims) next week. I have been studying Radio Reference and Southwest (Arizona) Frequency Guide information for the National Park Service analog, P25 and encrypted radio updates. Does anyone have addtional updated information to share, or is Radio Reference the most current data? Have any of the "Phase 2" multi-site simulcast P25 sites come on-line (Mt Emma, Kannanowitz and Paria) and does anyone have frequency information. Are the in-canyon comms still analog VHF, or P25? I am really looking forward to visiting your state again. Thank you, Kurt Swaney, Colorado

Well, it WOULD be digital, since it's a P25 DIGITAL system.
If you mean 'encrypted', then you're probably right.

>Another talk group believed to be u.s.Marshall very very active on Yuma RCS system. Also compleatly digital.

More likely DPS detectives [CID], possibly on a task force.

>Down in D6 AREA CASA GRANDE STARTING TO SEE MORE ACTIVITY ON YUMAS SYSTEM AZDPS CID VERY ACTIVE BUTT DIGITAL. NOT ALOT OF ANALOG OR NON DIGITAL TRAFFIC DPS DISTRICTS THOUGH. JUST EVER SO OFTEN.

A whole lot of detectives were just issued their new, multi-band portables, capable of operating on the Yuma system.

>AM CURIOUS THOUGH DOES.ANYONE KNOW WHAT THE HELL IS GOING ON WITH DPS.D6 RADIO. ALMOST DAILY FOR WELL OVER A WEEK CONSTANT OPEN CARRIERS AND THE REPEATER GOING UP AND DOWN. AND ALOT OF INTERFERENCE ON THAT DISTRICT. ARE THEY MAKING CHANGES?.

Backhaul problems.

Some active frequencies at Grand Canyon West today.

Grand Canyon West Resort (Haulapai Indian Nation), WQKA393
158.415 Rout PL 203.5, 151.550 Rin, Operations-Security Ch 1
160.095 Rout , 151.715 Rin, Operations-Security Ch 2

Grand Canyon West Corp (Haulapai Indian Nation), WQKF677
159.510 Rout PL 114.8, 152.870 Rin, Helicopter Tour Operations

Grand Canyon West Airport (Haulapai Indian Nation), WQEV858
151.055 Rout PL 136.5, 156.060 Rin, Grand Canyon West Airport Operations

Grand Canyon West Airport (K1G4)
119.425 AWOS, WQKH508
122.900 Unicom
460.5875 remote link to AWOS transmitter, WQPJ733

121.950 various Grand Canyon tour helicopter operations
122.725 various Grand Canyon tour helicopter operations
123.450 various Grand Canyon tour helicopter operations

The Hualapai Police, Fire and EMS licenses also include the Grand Canyon West area. In particular, their 453.425 signal, WQKG509, sounded digitally encrypted.

18207. 170.075 MHz Fire IC in western Grand Canyon area?

Yahoo group: ArizonaScanner (2013 — 2016)
Date: 2013-08-11 22:59:26 UTC
From: kswaney80020
Topic: 18207 Message: 18207

Hello Everyone,

Yesterday while at Grand Canyon West (reasonably strong) and then again today from Grand Canyon south rim (weaker) I am hearing fire "IC" and "tower" related conversations on 170.075 MHz, DCS 051. The frequency does appear to be being used for a small working wildfire. I'm not immediately finding this frequency in my reference material. Is anyone familiar with it's assignment?

Thank you,
Kurt

what has happened to the Phoenix VHF and UHF frequencies
I found not really any activity on 154.89, 451.1, 453.45, 154.07, but you still hear the fire dispatches on 154.19

the 700, 800, and 900 MHZ frequencies have their limitations and one would think that these would be fallback in cases of poor 800Mhhz coverage.

On another note, I have monitored some more testing on the YCRS system I've heard the testing both in Maricopa county and in Cochise county...

down in Cochise county, the CCSO has used some grant money to activate a few more releaters and improve their radio coverage on 155.04 and 453.85 At times these two may be patched together.

the DPS coverage in Cochise and Graham county on 460.325 is generally quite good.

You can occasionally hear the Border Patrol on the Cochise Sheriff frequencies and at times on the DPS channels. I've heard the New Mexico Highway patrol and Sheriff on occasion but usually their signals are blocked by the mountains.

I do detect carrier on the CHP frequencies but nothing else.. CHP usually is in the 37 and 42 mhz area

The only vhf channels from PHX is portions of the old PHX fire vhf and I believe its because they share those with other valley fire agencies that aren't fully integrated into the RWC system.I've been noticing that YUMA RCS AND MESA PC SYSTEM ALL OF A SUDDEN IS VERY ACTIVE IN YUMA/PINAL/PIMA/MARICOPA COUNTIES SO FAR THAT IVE OBSERVED. THE BIG DISAPPOINTMENT THOUGH IS DPS CID CHANNELS AREW ALL DIGITAL.even FEDERAL AGENCIES ARE JUMPING ONBOARD. IN YUMA CO HAVENT HEARD SOMERTON OR SAN LUIS POP UP THOUGH. THE BIG DISAPPOINTMENT. IN YUMA CO IS THAT YOU HEAR THE DISPATCHER LOUD AND CLEAR FOR YUMA CO AND YUMA PD BUTT UNITS ARE COMPLEATLY DIGITAL.INCLUDING FIRE EXCEPT RURAL METRO.

18210. Grand Canyon P25 system updates

Yahoo group: ArizonaScanner (2013 — 2016)
Date: 2013-08-17 16:29:50 UTC
From: kswaney80020
Topic: 18210 Message: 18210

Hello,

After spending a few days on the south rim and one day on the north rim of the Grand Canyon, here are some P25 system frequency updates:

(Some of these are corrections to the existing RR AZ US Gov, AZ Coconino County, and Grand Canyon wiki forums; I will submit those updates separately.)

Site Net Frequency NAC Input NACin
CC Hill TAC 169.1625 293
Desert View TAC 169.7875 293
Hopi Point TAC 169.7750 293
CC Hill Fire 172.1125 293
Desert View Fire 172.5250 293
Hopi Point Fire 172.4250 293 164.6750 293
CC Hill Law 171.5375 293
Desert View Law 171.6750 293
Hopi Point Law 170.3875 293 162.1625 293
CC Hill Med 171.6500 293
Desert View Med 172.1375 293
Hopi Point Med 171.7750 293 163.0250 293
CC Hill Admin 169.6250 293
Desert View Admin 169.7250 293
Hopi Point Admin 169.6500 293 163.5750 293

While I concur that most of the radio traffic on the Law net is encrypted, I did observe (what appeared to be) cross-patched clear helo (from the Fire net) on the Law net, as well as the occasional odd clear transmission on the Law net.

Regarding input frequencies, I was expecting either different NACs (with same input frequency) or perhaps different input frequencies for the Desert View and CC Hill sites. I never heard a GCNP transmission that was not NAC 293; and I was not able to locate alternate input frequencies for DV or CCH, So work still to be done here. And there was little TAC net traffic while I was visiting, so I never caught the TAC net input frequency.

I was also curious about the reported Mt Emma, North Entrance and Paria North P25 sites. I only saw microwave dishes pointed at Hopi Point, Desert View and CC Hill. I did not see any westerly-pointing microwave (i.e. toward Mt Emma). There is an additional microwave dish on the Desert View tower pointing northeast (like, towards Navajo Mtn); anyone know what that might be for?

I did hear several other P25 frequencies in use, some encrypted, and some not NAC 293. Here are my notes:

Sounded Repeater Out Med Net 165.7250 NAC 293 Location TBD
Sounded Repeater Out Fire Net 166.7000 NAC 293 Location TBD
Sounded Repeater Out Law Net 170.7625 NAC 293 Location TBD

Sounded Repeater Out Med Net 171.2250 NAC 293 Location TBD

P25 encrypted 167.4125 NAC 167
P25 encrypted 167.6875 NAC 167
P25 encrypted 167.7375 NAC 167
P25 encrypted 172.3500 NAC 167

And finally, P25 voice, 163.025 NAC 093; more helo/un-ID'd dispatch traffic. Note that this is the same input freq as Hopi Point, but different NAC, and no radio corresponding GCNP P25 radio net traffic.

I enjoyed my visit to the Grand Canyon and look forward sharing notes on these frequency findings with others, as well as scanning the GCNP P25 system again.

Kurt

Don't forget to submit what you found to Radio Reference. It's a much better resource than trying to search back through the mailing list archives for updates.

Nice to see some others trying to decode the GCN system. When it first went active and they where testing the system I manage to get the following in a few days of listening. I have always wanted someone to try and confirm these.

Primary Digital Zone

Desert View Repeaters

LAW NET DV P25 171.675000 NAC 293
Fire Net DV P25 172.525000 NAC 293
ADMIN NET DV P25 169.725000 NAC 293
MED NET DV P25 172.137500 NAC 293
TAC NET DV P25 169.787500 NAC 293

Hopi Point Repeaters

Law Net HP P25 170.387500 NAC 293
Fire Net HP P25 172.425000 NAC 293
Admin Net HP P25 169.625000 NAC 293
Med Net HP P25 171.775000 NAC 293
TAC NET HP P25 169.775000 NAC 293

CC Hill Repeaters

LAW NET CC P25 171.537500 NAC 293
Fire Net CC P25 172.112500 NAC 293
Admin Net CC P25 169.650000 NAC 293
MED NET CC P25 171.650000 NAC 293

Subject: [ArizonaScanner.com] Grand Canyon P25 system updates

Hello,

After spending a few days on the south rim and one day on the north rim of the Grand Canyon, here are some P25 system frequency updates:

(Some of these are corrections to the existing RR AZ US Gov, AZ Coconino County, and Grand Canyon wiki forums; I will submit those updates separately.)

Site Net Frequency NAC Input NACin
CC Hill TAC 169.1625 293
Desert View TAC 169.7875 293
Hopi Point TAC 169.7750 293
CC Hill Fire 172.1125 293
Desert View Fire 172.5250 293
Hopi Point Fire 172.4250 293 164.6750 293
CC Hill Law 171.5375 293
Desert View Law 171.6750 293
Hopi Point Law 170.3875 293 162.1625 293
CC Hill Med 171.6500 293
Desert View Med 172.1375 293
Hopi Point Med 171.7750 293 163.0250 293
CC Hill Admin 169.6250 293
Desert View Admin 169.7250 293
Hopi Point Admin 169.6500 293 163.5750 293

While I concur that most of the radio traffic on the Law net is encrypted, I did observe (what appeared to be) cross-patched clear helo (from the Fire net) on the Law net, as well as the occasional odd clear transmission on the Law net.

Regarding input frequencies, I was expecting either different NACs (with same input frequency) or perhaps different input frequencies for the Desert View and CC Hill sites. I never heard a GCNP transmission that was not NAC 293; and I was not able to locate alternate input frequencies for DV or CCH, So work still to be done here. And there was little TAC net traffic while I was visiting, so I never caught the TAC net input frequency.

I was also curious about the reported Mt Emma, North Entrance and Paria North P25 sites. I only saw microwave dishes pointed at Hopi Point, Desert View and CC Hill. I did not see any westerly-pointing microwave (i.e. toward Mt Emma). There is an additional microwave dish on the Desert View tower pointing northeast (like, towards Navajo Mtn); anyone know what that might be for?

I did hear several other P25 frequencies in use, some encrypted, and some not NAC 293. Here are my notes:

Sounded Repeater Out Med Net 165.7250 NAC 293 Location TBD
Sounded Repeater Out Fire Net 166.7000 NAC 293 Location TBD
Sounded Repeater Out Law Net 170.7625 NAC 293 Location TBD
Sounded Repeater Out Med Net 171.2250 NAC 293 Location TBD

P25 encrypted 167.4125 NAC 167
P25 encrypted 167.6875 NAC 167
P25 encrypted 167.7375 NAC 167
P25 encrypted 172.3500 NAC 167

And finally, P25 voice, 163.025 NAC 093; more helo/un-ID'd dispatch traffic. Note that this is the same input freq as Hopi Point, but different NAC, and no radio corresponding GCNP P25 radio net traffic.

I enjoyed my visit to the Grand Canyon and look forward sharing notes on these frequency findings with others, as well as scanning the GCNP P25 system again.

Kurt

Now that fire season is over I think unless we don't get rain in the very near future my USFS scanner I like to turn into light rail scanning. Would anyone be intrested in listening to this stream? It gets pretty busy!

From: Richard Gaun
Topic: 18224 Message: 18225

The only time I hear them using tones is for Sky Harbor, Avondale Bat Chief, Southwest Deputy Chief, Buckeye Rescues and notification of muti alarm fires. Oh and the weekly test off all the mountain tops. I thought I have them in my BC15 but after looking I guess not. I looked in Radio Reference Fire Tone Out page but did not find any for Phoenix or any other Department dispatched by the Regional Dispatch Center.

18226. PSR-500 Maricopa County file

Yahoo group: ArizonaScanner (2013 — 2016)
Date: 2013-09-24 19:44:23 UTC
From: <brewdave1@...>
Topic: 18226 Message: 18226

A friend and I bought the GRE PSR-500 when they first came out. We both bought the ARC500 Pro software, the Southwest Frequency directory, and joined RadioReference. After programming multiple different ways, both of us are severely disappointed in the results. We hear none of the trunked systems other than an occasional MCSO transmission. The only thing we hear is analog. Both of us have discones outside and I have even tried a preamp. I am located in Chandler and my buddy is in Glendale. I see in the files section a file for the Phx area that dates back to 2010. Does anyone have a file of Maricopa county for the PSR-500 that they are willing to share that is more up to date? I would really like to figure out what we did wrong on the programming and not have my scanner be a paperweight on my desk. Thanks.

Dave

18227. digital vs analog scanning

Yahoo group: ArizonaScanner (2013 — 2016)
Date: 2013-09-24 21:24:57 UTC
From: ja moran
Topic: 18226 Message: 18227

I have both an AOR-8000 and a uniden scanner. the Uniden radio does a good job of trunk tracking and monitoring the 800 and 900 MHZ P-25 and other formats while the AOR radio does a good job of monitoring the analog stuff....

One agency I can sometimes get is GRIC I can hear the EMS dispatches eithrer on their 800 mhz or on 453.85 but otherwise they are hard to copy GRIC = Gila River Indian Community

for a long time the MCSO was on 460.05, 460.1, 460.2 now you hear Southwest Ambulance there I used to be able to pick up MCSO on both my Uniden and AOR radio but now usually just on the Uniden radio.

Down in Tucson ther are some things you can pick up really well but others are harder to copy

In Cochise county, you generally can hear most agencies quite well. There have been a few new repeaters brought online which means you can now hear stuff much better all over the county. You can only hear CBP when they are on an analog channel or on a common interagency frequency like when there are fires or other incidents... CBP = Customs and Border Protection aka Border Patrol

the Yuma system can be heard in both Phoenix Tucson and in Cochise county due to their network of repeaters
I've heard ADOT and also some DPS/Highway patrol traffic on these frequencies...

JOHN

Can I ask you a question? What are you looking to pick up? All of mesa fire and pd are on digital which you should have no problem picking up in chandler, you will not pick up mesa, in Glendale . Phx fire is running off of both, Mcso is using analog and come in nice and clear. Remember with the didgital you only need to use the control channels. Set your scanner in stationary mode . You may need to use the ATT button to pick up better on the digital side. If have to I would be more then happy tosend you what i have. I am using arc 500 because I have a pro197 scanner. I may even beable to upload your scanner for you. I do believe the Arc 500 does load the pro197 also!

I don't hear Chandler, Mesa, or Tempe even though I have them programmed in. I live in Chandler which is primarily what I want to hear. I also am within a mile of Tempe and Mesa so it would be nice to hear them too.

The comment about Glendale is that my buddy lives in Glendale, we programmed his scanner for Glendale, and we hear nothing. I am trying to help him out too. We are both frustrated we were not hearing anything digital. Both of us push this project aside and went on to other radio projects. I am just getting back to this to figure out what we did wrong. Something we did is fundamentally wrong.

I want to do a comparison between our programming and a file that is working for someone else. So yes, please send your file to me. Greatly appreciate your help.

I'm currently using

https://play.google.com/store/apps/details?id=com.berobo.android.scanner

or

https://play.google.com/store/apps/details?id=com.scannerradio_pro

to listen to the scanner and :

https://play.google.com/store/apps/details?id=com.ajeff.policescannercode

to decipher the police codes used in radio traffic.

I am considering buying a radio. Is there a standard 'starter radio' ? My interests are mostly in police / emergency traffic. I would like to hear Mesa if possible.

Thank you !

Matt

If you want to hear Mesa then you're going to need a radio capable of decoding P25 digital trunking and audio. If by "starter" you mean inexpensive, that's not going be one of these radios. The P25 digital trunking scanners from Uniden and GRE/RadioShack are going to be over $400.

It's a light week but it's better than nothing. Although it looks like new land mobile licenses were not granted during the shutdown, there were about 167 new licenses (WQSJ742 to WQSK213) issued on the cutoff week. Also, around 730 non-new land mobile licenses had grants during the shutdown. A lot of this is automated. Most likely a few hundred of those were license modifications. I'm going to look into pulling the "lost" grants from the full database but it may be too much of a pain to do. I'll let you know.

18248. Ping N7NMD - Stop Sending EMERGENCY Beacons

Yahoo group: ArizonaScanner (2013 — 2016)
Date: 2013-12-16 09:29:23 UTC
From: Craig 'Lumpy' Lemke
Topic: 18248 Message: 18248

Anyone know Dan, N7NMD ?

He is creating Phoenix FD objects on APRS
and assigning them the MicE EMERGENCY! status.
It's causing APRS software to set off alarms
and is certainly not what the EMERGENCY! status
flag is intended to convey.

Attempting to contact him via his QRZ email
gets no response.

Thanks very much Dennis. I think his intent is to
show when Phx FD units go out on a call. But his
lighting up the EMERG beacon is the equivalent
of calling SOS on phone or CW. I'd guess he's simply
not aware that's very inappropriate.

Thanks Again -

Sgt Lumpy

18251. firedb

Yahoo group: ArizonaScanner (2013 — 2016)

From: Dan Zubey
Topic: 18251 Message: 18251

Hi there, this is Dan.

Lumpy, I did get your emails, I had a nice reply drafted, and your second email contained some allegations, and caused me to contact the local OO directly first. I do apologize for the delay.

First off, here's a writeup of the system:
http://openincident.com/map/firedb.txt.

To be clear, the system is creating APRS objects owned by me, my callsign does not use the \! APRS icon. So it is obvious that I am not sending out SOS.

In the APRS specification (http://www.aprs.org/symbols/symbolsX.txt and ftp://ftp.tapr.org/aprssig/aprsspec/spec/aprs101m/APRS101m.pdf) it does not indicate that the \! icon is an SOS call for help. The fact that the icon is a call for SOS seems to be something that a few APRS software vendors have decided upon, and some packages allow one to create an alarm if that icon comes across. However, by looking at the icons on aprs.fi and xastir there is no indication of a life/death status from those icons.

So this is a situation of multiple different software interpretations of a spec. According to the OO, there is no law saying that the \! icon indicates the legal definition of an SOS. Some software packages seem to have assumed that it is.

That said, I'm going to suggest two things. To help out, I will change the icon to something else, and I would also suggest we all understand the radios and protocols we're using. I do wish the aprs specification were much more clear and formalized.

Thanks,

-Dan N7NMD

Thanks Dan -

The choice of icon isn't the problem. It's the
setting of the MicE "EMERGENCY" flag in whatever
software you're using. That flag sets off alarms
in Kenwood radios, WinAPRS, MacAPRS, DOSAPRS, APRSIS
etc. You can use any icon in the list. What's not
appropriate, however, is setting the MicE flag to
"EMERGENCY", which I think you have done inadvertently.

I suspect, if you're not aware you're setting it,
that it could be your software that's setting it. ie,
it's not in the interpretation of the icon at
the RECEIVE end, but it may be in the interpretation
at your TRANSMIT end. But it seems more likely that
the MicE flag is simply getting set somewhere else
in your software, and you're simply not aware of it.

Thanks for turning it off. The alarms in the
APRS network (including through IS, worldwide)
have stopped going off. It really
is the equivalent of keying up on the air and
declaring "I HAVE AN EMERGENCY".

There is a fire truck icon. Perhaps that would
be appropriate to whatever it is you're trying
to portray. That symbol is "/f" (primary table,
lower case f).

re: Your "drafting an email response"...When you're
declaring an emergency (in this case several of them

at once) an immediate way to receive responses seems like a given. But again, you were not aware that you were indeed declaring an emergency. But your operation appeared to all of APRS land as an "Unattended Transmitter Declaring an Emergency".

Glad you got it resolved. I've been involved in APRS in every platform from the first beta tests that Bob did decades ago. If you need help with anything about it, I'll be glad to try and help.

Okay. I've figured out what's going on.

I'm not setting the MIC-E flag, or using any MIC-E at all. The destination call is always APZXXX, which -among other things- tells client software it's not MIC-E.That's straight from the aprs docs. See chapter 4, page 13.

That said, I spent the day researching to figure out how you could possibly be seeing what you saw.

I see on aprs.fi you're using both WinAPRS 2.5.1 and a version of APRSISCE/32.I installed both packages today and tested both. WinAPRS 2.5.1 was released something like 10 years ago, but I did find it. I spoke with the author of APRSISCE/32 today, and on older versions, the /! icon triggered the same alert as a MIC-E emergency. He took that feature out awhile ago.

Long story short, there is no MIC-E status, it's a 'feature' in that software version. Please kindly ensure you're using the latest version of both software packages.

I do hope that helps.

Thanks,

-Dan N7NMD

You've stopped sending !EMERGENCY! beacons.
Thousands of Kenwood radios and thousands
of APRS software platforms will now not
receive an alert.

That does indeed help.

Thanks for taking responsiblilty for
your transmissions. Problem resolved.

18265. Stratus PSAP Survey Results

Yahoo group: ArizonaScanner (2013 — 2016)
Date: 2014-02-06 21:08:42 UTC
From: 9-1-1 Vendor News
Topic: 18265 Message: 18265

The Results Are In... for the 2013 PSAP Survey

Are you curious to learn how your Public Safety Answering Point compares to other PSAPs in terms of staffing, population served, 9-1-1 call volume, calls dispatched, technology, progress on NG9-1-1 and more?

Get the 2013 survey results and find out at:
http://go.stratus.com/911Mag

During October through December of 2013, Stratus Technologies surveyed 919 PSAP employees, primarily in North America. The 19 question survey featured topics including call volume, staffing, next-generation 9-1-1 migration, use of virtualization technologies, system outages and more.

Get this report to see the results of the 2013 PSAP survey as well as some trends based on the 2012 survey.

Get the Results at: http://go.stratus.com/911Mag

This is like most, if not all of the scanner email lists I belong to.
Traffic has dwindled to almost nothing. Even the SoCal fire list is
mostly quiet .. even during major fires. I really don't know where
everyone went.

I think some of the problem is that sources of good info dried up or moved on to other areas such as the RR forum. It also doesn't help that some of the system admins would glean info from the group to make adjustments (read: encryption) thus driving anyone with a new find underground.

That is not to lump all because some of those folks have been good members of the community. Maybe it's time for a last call for the group.

I will certainly put my 2¢ into the conversation in the form of a question for the group to help jumpstart the Arizona Scanner group site. My question is: I recently visited Gila Bend and noticed when coming into town a "compound" where DPS officers apparently live who patrol this area. What frequency does DPS use in the Gila Bend area???

Thank you.

Elect Republicans to fix govt

On Monday, February 10, 2014 2:06 PM, John Timmons <mayberry85239@...> wrote:

I will certainly put my 2¢ into the conversation in the form of a question for the group to help jumpstart the Arizona Scanner group site. My question is: I recently visited Gila Bend and noticed when coming into town a "compound" where DPS officers apparently live who patrol this area. What frequency does DPS use in the Gila Bend area???

Thank you.

I think some of the problem is that sources of good info dried up or moved on to other areas such as the RR forum. It also doesn't help that some of the system admins would glean info from the group to make adjustments (read: encryption) thus driving anyone with a new find underground.

That is not to lump all because some of those folks have been good members of the community. Maybe it's time for a last call for the group.

On Sat, Feb 8, 2014 at 4:10 PM, Tom Humes <tw.humes@yahoo.com> wrote:

my reason is that i moved to Taylor, AZ into an apartment. The apartment is so dead.

Could you be hearing "KS" by chance?

If it is "KS", that is "Knutsen Station" at 16th ST & University Dr in Phoenix and is often refered to on the radio as just "KS".. It is named after Doug Knutson, a DPS officer that was killed in the line of duty.

Greg, thanks for asking. The sales of the book dropped pretty significantly through the last few editions, to the point where it has become cost-prohibitive to publish a new edition given the up-front cost and reduced likelihood those costs would ever be recovered. As a result, I haven't published a new edition in several years, but I can't say for certain what the future holds.

Best regards,

Dan Rollman

18300. Re: [ArizonaScanner.com] AZ scanner group

Yahoo group: ArizonaScanner (2013 — 2016)
Date: 2014-02-13 18:07:01 UTC
From: Dan Rollman
Topic: 18266 Message: 18300

Yes, I did that some years back (and actually do that still with a couple of other regions). We sell even fewer of the PDFs than we sold of the books once we go PDF, given a minority of the folks who receive and use copies of the PDF actually paid for it, unfortunately. The close-nit community among hobbyists is a good thing overall, but naturally makes it relatively easy for just a few people to buy a PDF and "share" it with large groups. The decision, then, is whether I can afford the investment of the hundreds of hours of time spent creating a new edition only to largely give it away. Were I retired from full-time work, I'd love to do that.

I've never claimed any ownership of the actual facts in my books (for obvious reasons) and others are free to manually lift the "information" into other resources online or in print with their own editing slant, but automated reproducing of the entire book as-is, is problematic for my ability to continue to invest in new editions

Best regards,

Dan Rollman

Dan that is why it drives the cost up when you get people who want nothing but freebies. Doing well here in northern AZ. Going thru chemotherapy. Hope things are going well in your neck of the snowy woods. lol

On Thursday, February 13, 2014 11:13 AM, Dan Rollman <danrollman@scannerstuff.com> wrote:

Yes, I did that some years back (and actually do that still with a couple of other regions). We sell even fewer of the PDFs than we sold of the books once we go PDF, given a minority of the folks who receive and use copies of the PDF actually paid for it, unfortunately. The close-nit community among hobbyists is a good thing overall, but naturally makes it relatively easy for just a few people to buy a PDF and "share" it with large groups. The decision, then, is whether I can afford the investment of the hundreds of hours of time spent creating a new edition only to largely give it away. Were I retired from full-time work, I'd love to do that.

I've never claimed any ownership of the actual facts in my books (for obvious reasons) and others are free to manually lift the "information" into other resources online or in print with their own editing slant, but automated reproducing of the entire book as-is, is problematic for my ability to continue to invest in new editions

Best regards,

Dan Rollman

18305. Metrocenter UHF logs...

Yahoo group: ArizonaScanner (2013 — 2016)
Date: 2014-02-13 20:14:39 UTC
From: kb7aqd Homuth
Topic: 18305 Message: 18305

Rig: FT277
Antenna: Smiley 70cm rubber duck.

Besides most of the 22 GMRS/FRS frequencies active with restaurants, hotels and retail comms, here are some other targets I logged. I set the rig to "HOLD" under the RESUME setting so that the HT stopped when someone keyed up, and notched the RF SQUELCH to S9+ so that birdies and intermod from nearby Shaw Butte transmitters wouldn't interfere.

467.7625 Home Depot voice pager from I-17 at Thunderbird northeast corner.
467.8125 Data pager
464.5000 Restaurant staff
464.5500 Data bursts
467.8500 to 467.9250 Business comms
467.7500 Pager coasters at Fuddruckers I-17 at Dunlap

Unless a Mesa unit is associated with that tower you're not going to hear anything. I would think it would be pretty rare for a Mesa unit to be associated with Shaw Butte. I'm sure the majority of the time Mesa units are associated with Mesa Simulcast or Thompson Peak. I'm guessing the Shaw Butte site is for when a Mesa unit has to make some kind of trip in to Phoenix and they can still be in contact with their dispatch.

You were given some incomplete advice: that the ONLY towers you can hear Mesa on are those on the Mesa Simulcast Frequencies http://www.radioreference.com/apps/db/?sid=2082 site 001. They are NOT the only towers, just the BEST.

The good advice you got was that the Thompson Peak (002) and Shaw Butte (003) sites are fill-in sites, and will only carry a talk group when there is a field unit affiliated with the site and tuned to the talk group. That might occur on transports from Mesa to the downtown Phoenix courthouse or jails, or a pursuit that goes into Phoenix, for example.

If you have to depend on the TPK or SBT sites and can't receive the main simulcast frequencies, then you're probably not going to be happy. Solution: outside directional antenna, maybe.

From: Joe Badura
Topic: 18293 Message: 18315

Can you clarify the talkgroup you are interested in for channel B11? Different agencies will have different talkgroups or frequencies programmed in channel B11 of their radios. (i.e. Phoenix vs Tempe vs Scottsdale vs Mesa will all have different talkgroups programmed for B11). If you are referring to Mesa PD B11, in the past this was documented as being talkgroup 3064 for Mesa Fire dispatch. This talkgroup would only be available on the Mesa system (TRWC) and not the RWC.

The Mesa system (TRWC) and the RWC are currently separate systems as they were split a few years back. Talkgroups on the TRWC will not be available on the RWC and vise versa at the present time. There are talks about again linking the systems, but this will not happen for some time, if ever.

From: John H. Guetherman
Topic: 18317 Message: 18317

Reference B-11. Are you referring to Blue Deck 11, where Phoenix Fire assigns units, especially Tempe and Chandler, when they respond into Mesa or Gilbert for mutual-aid calls? That should be Mesa Fire Department's VHF channel 1, 154.340, with a DCS of 114.

If PFD's B-deck channelization has changed in the past year or two (since the narrowbanding mandate), could someone update the newest line-up? The info I have is from right around when the narrowbanding went into affect, and both PFD and MFD went from CTCSS to DCS on most of their VHF channels.

Hard to claim it works with with a non-existent standard.
Phase 2 is still on the drawing board.

18325. RE: [ArizonaScanner.com] Uniden BCD396XT

Yahoo group: ArizonaScanner (2013 — 2016)
Date: 2014-03-06 19:52:44 UTC
From: Joe Badura
Topic: 18319 Message: 18325

The RWC will be transitioning to Phase 2 in the next few
years. The sites transmitting 800mhz
will go first. They are already working
on Simulcast C which will move to 700mhz Phase 2 likely sometime later this
year or early next year. Following
Simulcast C will be Simulcast A, Simulcast B, and then the remaining sites
after. All talkgroups will not be moved to TDMA until the entire systems is Phase 2. If you are in the market for a
scanner today, it might be best to look at the 436 as other scanners will start
becoming obsolete when it comes to fully monitoring the RWC in the coming years.

Not considering Phase 2, I recently sold my 396XT as the 436HP does a much better job
receiving P25 on Simulcast systems in addition to MANY other new features.

I find that rather amazing since our PCWIN P25 Phase 2 system is working
quite well for a non-existent standard.

What you got was Motorola's interpretation of the framework for Phase 2,
since the standard hasn't been finalized.
Just like for Phase 1.
Most likely will only allow "M" radios to work on it. Another expensive
'sole source'.

I think you are referring to P25 Phase 2 for conventional
which have not been published. P25 Phase
2 standards for Trunking Systems were published in 2010, and there are over 50
known P25 Phase 2 trunked systems in use today throughout the nation. There
are at least two P25 Phase 2 Trunked systems in Arizona that are currently being
constructed are on the air being tested – PCWIN in Pima County and Salt River Pima-Maricopa
Indian
Community in Maricopa County.

Agreed. I have my 436 and 536 working very well on the Illinois StarCom21 Phase 2 site near Chicago.

The 436 and 536 also work much better on P25 Simulcast systems, which the XT and GRE series scanners have struggled with.

Date: 2014-03-07 06:48:20 UTC
From: Jim Myers
Topic: 18319 Message: 18330

Actually we have tested Motorola, Tait, and Harris radios. We chose Motorola, but that choice was ours, not forced. Really not wise to criticize a system that you know NOTHING about.

The P25 Phase 2 TDMA MAC and P25 Phase 2 TDMA Physical layer have long been approved. The completion of these standards (TDMA Physical Layer TIA-102.BBAB and TDMA MAC Layer TIA-102.BBAC) has enabled manufacturers to develop P25 Phase 2 TDMA Trunked equipment. This is NOT X2-TDMA, but Phase 2 TDMA standard equipment. Motorola has been shipping Phase 2 TDMA equipment for a few years now.

With the MAC and Physical Layers set, there is ZERO likelihood that ANY Phase 2 TDMA system has anything to worry about.

Just like the 802.11N routers that came out before N was finalized, they ALL work.

Semantics really has no value when we are discussing what is happening in reality.

I'm not talking in semantics but real world systems.
'M' made their own interpretation of the Phase 1 specs, and a number of features they implemented were NOT to the final spec.
So, other manufacturer's radios don't work on a Motorola P25 P1 system like they would on any other manufacturer's infrastructure.

When you say that you tested Motorola, Tait and Harris, were your referring to the infrastructure?
Or the subscriber units on a Motorola infrastructure?

As you can tell, I have no love for anything 'Big M'.
The agency I worked for got taken by them a number of times over the years.
And I've watched them do similar things to a lot of other agencies of varying sizes across the country.
Maybe now that they've gotten rid of the cellphones, they'll take a better approach to Public Safety, but I'm reserving judgement.

From: Tom Humes
Topic: 18319 Message: 18332

I live up north in Navajo Co. Today they put in the daily rag the planning for P25 that is being put forward. They are at least a year away. My question is for filing in my records only. What is on the front burner as to what the possibilities of systems and standards that I should expect. I know that is a loaded question but only have my barrels are working.

I'm not talking
in semantics but real world systems.
'M' made their own interpretation of the Phase
1 specs, and a number of features they implemented were NOT
to the final spec.

So, other manufacturer's radios don't work on
a Motorola P25 P1 system like they would on any other
manufacturer's infrastructure.

When you say that you tested Motorola, Tait and
Harris, were your referring to the infrastructure?

Or the subscriber units on a Motorola infrastructure?

As you can tell, I have no love for anything 'Big
M'.
The agency I worked for got taken by them a number of times
over the years.
And I've watched them do similar things to a lot
of other agencies of varying sizes across the country.

Maybe now that they've gotten rid of the
cellphones, they'll take a better approach to Public
Safety, but I'm reserving judgement.

was ours, not forced. Really not wise to criticize a

system that you know NOTHING about.
The P25 Phase 2 TDMA MAC and P25 Phase 2 TDMA
Physical layer have long been approved. The completion of these
standards (TDMA Physical Layer TIA-102.BBAB and TDMA MAC
Layer TIA-102.BBAC) has enabled manufacturers to develop P25
Phase 2 TDMA Trunked equipment. This is NOT X2-TDMA,
but Phase 2 TDMA standard equipment. Motorola has been
shipping Phase 2 TDMA equipment for a few years now.

With the MAC and Physical Layers set, there is ZERO
likelihood that ANY Phase 2 TDMA system has anything to
worry about.

Just like the 802.11N routers that came out
before N was finalized, they ALL work.
Semantics really has no value when we are
discussing what is happening in reality.

Considering that Navajo Co is all Analog conventional today, they are probably just planning to purchase P25 capable radios. If they are planning to replace the infrastructure, then you will likely see P25 conventional that any of the Digital Scanners that are P25 capable can monitor. Keep in mind if they implement P25, it is just a few dollars more to get some encryption capabilities that no scanner can monitor.

I doubt they would be considering a Trunked system unless they plan to jump on the statewide system once it gets built there. If they do decide on trunking, hit up the group again in the future, and we can talk more once they have chosen a trunking technology.

If you listen outside of Navajo County, then the BCD396XT will let you listen to almost every Public Service radio system throughout the state (with the exception of P25 Phase 2, LTR Passport, and MOTOTRBO). If you need to monitor Pima County, SRPMIC, any up and coming P25 Phase 2 systems, then go for the BCD436HP.

We reviewed systems from all three. We chose Motorola. Our Motorola system is pure spec - any radios will work on it. The major reason for this system was interoperability - we made certain that we would not be locked into any one vendor since we cannot dictate what vendors the people we may need to work with are using.

I appreciate the heads up on the potential downfalls.

18335. Weekly FCC grants March 02-08

Yahoo group: ArizonaScanner (2013 — 2016)
Date: 2014-03-09 10:24:57 UTC
From: Glenn Mitchell
Topic: 18040 Message: 18335

I added the antenna data from the license. It still needs to be cleaned up a little. HTT is height to tip and HAAT is height above average terrain.

The weekly FCC grants and new applications are ready:
http://home.comcast.net/~gmitch86/quick.htm

Past weeks are here:
http://home.comcast.net/~gmitch86/archive/archive.htm

Or Google "Quick Scanner Links"

From: ja moran
Topic: 18336 Message: 18336

I found a place talleycom.com that has a nice variety of antennas. IF they don't have it they can get it. They have antennas for all wavelengths and frequencies.... Talley has a Phoenix office but if Phoenix does not have yor item they will ship in from one of their other branches.

I built a rack behind the cab of my pickup which is made out of aluminum "angle iron ir "L" stock that's made into an inverted U shape. I've drilled 4 of the 3/4 holes in the part of the U that is parallel to the truck bed spaced about 12 to 5 inches apart. this works great because I did not have to drill holes in the cab

Topic: 18336 Message: 18345

just bought a NMO150/450/800 it's a truband antenna for about $36.00 at tallecom.com you can order via the web store but if the order is less than $50 you will have to call them. I ordered last Friday and the item was delivered yesterday

I also have a 27mhz (CB/10M) 2m/440 and a 150/450 antenna On my F150 I have 4 antennas, each is for a different radio. the antennas all have BNC connectors so I can easily move them to a different radio. On one of the radios I often use it for shortwave.. I can get VOA africa service RAdio China and Radio Canada clear most of the time... IT's something different to listen to while driving...

technology is nice when it works! ---

Your link resolves to w-link.com, which is Worldlink ISP. What is the name of the company that you bought the antenna from? I cannot find any reference to a tallecom.com. There is a Talleycom, but the closest to the antenna that you mention that they carry is over $500.

171.7500 is a Federal Allocation.

What PL/DPL tone are you getting. ??

In AZ this was the input to 172.4500 for NPS Grand Canyon.

Likely also a BIA use away from the Canyon.

The Thunderbirds were flying at Luke today doing the pre-show familiarization flights.

Heard them on 235.25 and 139.8.

Tomorrow, 3/14/14 they will do a full show practice and I should be able to add a few more.

From: Craig 'Lumpy' Lemke
Topic: 18336 Message: 18353

Perhaps it's time for an antenna reality check,
at least for some.

An antenna is an antenna is an antenna,
in terms of reception and "ability to hear".
That is to say, a 1/4 wave ground plane (or a
dbl or triple 5/8 collinear, or a yagi or anything else)
made by the XXX company will have exactly the same
ability to "hear" as an antenna made by the
YYY company as long as it's the same design antenna.

One brand of antenna may be built stronger,
able to withstand tougher working conditions
(mobile, weather, UV etc), and/or it may be
able to tolerate higher TRANSMIT power.
But none of those are a factor in a typical
scanner RECEIVE application. And it means nothing
to the ability of the antenna to "hear".

Paying a lot of money for a very expensive, commercial
grade antenna from Talley or similar may give you an
antenna that will last longer in the UV and Haboobs of
this part of Arizona. But a "less beefy" antenna, of
the same design, will perform exactly the same.

I agree with "Lumpy". When I was with the State of Vermont we (and I for that matter) exclusively used Larsen Antennas only because they had a state contract and the price break. Since retirement I just look for an antenna that meets the frequency and power requirement I'm looking for hence the mishmash of brands on my vehicle. The only one that I will say I did find a receive difference with was monitoring the RWC. I found the Wilson muti-band cell antenna received much better than a 1/4 wave.

"Paying a lot of money for a very expensive, commercial
grade antenna from Talley or similar may give you an
antenna that will last longer in the UV and Haboobs of
this part of Arizona"

Not necessarily.
DPS used to buy Antenna Specialists Mosaic's almost exclusively.
Then the company got sold, and some of the manufacturing was sent to
Mexico, along with changing to a 'cost reduced' center loading coil.
The new center loads were cracking within 2 years in the Arizona sun/heat,
where the older ones were fine 10+ years later.
They wouldn't do anything about it.
We changed brands to Larsen. Same 'design'.
They wouldn't radiate for sh_ _, and the springs were so floppy, the shafts
were hitting the motor officers in the back as they went down the road.
The new owners of ASP finally saw the handwriting on the wall, and combined
the shaft from MaxRad with the spring and base from ASP.
THIS works pretty good, and has been the go-to antenna for DPS cars ever
since.

Well, today, Pima County entities, including PCSO, have cut over from the EFJohnson Trunked System. It would seem the EFJohnson TRS may be shut down.

You will need a PSR-800, Uniden x36 radio to hear them.

Lots of activity, great to finally hear both sides of the PCSO conversations

Making sense of what we are hearing and will be posting something in the PCWIN system tonight on RR.com.

This will be a rolling addition of the other participants, so keep a listen to see as new departments come on line. It will take about a month to get everyone switched over to the PCWIN TRS.

Happy listening

Hi Tom,

Not sure what you mean about re-registering.

As long as you have the correct scanner type, you can monitor this system, for the most part. There is some encryption, so time will tell as to how much it will impact our listening.

If you mean, that you are a user of one of the current legacy systems that will be switching over to PCWIN, well, that is a great question for your training class when they introduce you to the radio and PCWIN.

I added some talkgroups that were immediately recognizeable to the RadioReference.com database last night.

Have fun !
FLANO

Yes it's up and running now,you will need a PSR-800 made by GRE you can still find them on e-bay,or one of the newer Uniden Scanners BCD436HP or the BCD536HP,this System is a Phase 2 TDMA,these scanners are the only ones on the market right now that do Phase 2,in a couple months a newer company named Whistler who brought the IP and patents from GRE will release the WS-1080 rebadged PSR-800 and WS-1095 rebadged PSR-900 never released mobile version!!

The BCD436HP is amazing, the 536 has a few bugs. The 436's front end is selective and sensitive. Very good so far. I am not impressed with the 536 for the price yet. Lots of software bugs

I have the BCD436HP handheld and it's working great on PCWIN. I monitor TFD, TPD, PCSO, RMFD, OVPD, UAPD, Pima College Police - I have great reception on all of them. I am on the far east side of town (Speedway/Harrison) and I primarily use the Simulcast A site.

I find programming with Sentinel very easy. As for the operation of the scanner itself, I also find that very easy. I like being able to choose systems and departments with the keypad. I have TPD entered by team number, so I can switch to team 4 by pressing .4E, team 1 by pressing .1E, etc.

Still have four 49.830 MHz Part 15 HT's. My brother and I enjoy using them in Phoenix area parks, since we hear only a rare baby monitor every once in a while. At Wildlife World Zoo, the units covered the open park areas full quieting.

We were dressed in matching polo shirts, dark glasses, and tan pants. People at the parks saw us with radios, and immediately dropped the cacti and rocks they were trying to take.

Have you any of these old-style pre FRS radios?

18388. ADOT Enforcement officers

Yahoo group: ArizonaScanner (2013 — 2016)
Date: 2014-06-06 09:12:54 UTC
From: John H. Guetherman
Topic: 18388 Message: 18388

Does anybody else monitor ADOT Enforcement officers, either on 154.905 (100.0) in northern Arizona, 156.120 (100.0) in central and southern Arizona, or on TG 1109 on the Yuma Regional Communications System? (There seems to be at least some simulcasting going on between the VHF channels and the YRCS talkgroup. I've heard the Phoenix dispatcher simulcasting on 156.120 and TG 1109 on occassion, but have not heard any officers on VHF side; and I've only heard the regular CW ID'er on 154.905 myself. Another member on the radioreference.com Arizona forum in Prescott said 154.905 is active from at least two locations in northern Arizona, and a member from Tucson has heard 156.120 active in southern Arizona.)

I have some questions regarding them if anyone has any answers:
1) How do their unit ID's/callsigns breakdown? Is there a way to determine by their callsign if an officer is stationed at a port of entry, or if the officer is on mobile patrol on the highway?
2) How do the ADOT Enforcement officers differ from the DPS Commercial Vehicle Enforcement Bureau officers? Or how much overlap is there between their duties?
3) Although ADOT Enforcement focuses on commercial vehicle enforcement, they do have a "duty to act" if they witness the driver of a passenger vehicle committing a traffic offense, and may pull that driver over to issue a warning or citation. As some people are want to do, some may refuse to pull over, and may attempt to flee. What is ADOT Enforcement's pursuit policy? Will they pursue, or do they notify DPS, or the appropriate local agency if on surface streets, and simply let the failure to yield go?
4) Does ADOT Enforcement have a civillian observer ride along program, and if so, how does a citizen apply to do so? I'd be interested in riding along with an officer on mobile patrol in the metro Phoenix area.

I've actually not seen them on any of the highways, but I have seen them twice on surface streets. Once going west at 83rd Ave & Thunderbird Rd in Peoria back in September I think it was, and a month or two ago, at 43rd & Peoria Aves on the Glendale/Phoenix border, when I saw two of their Tahoes turn east on Peoria from southbound 43rd Ave.

ADOT has a blog post with a pic of an officer and his Tahoe, as well as a video (that may be available on youtube) which explains all about the Enforcement and Compliance Division's duties, if anyone is interested in learning something about them. (My phone won't play video's, so I haven't actually watched it, but someone else on the radioreference.com Arizona forum said it was professionally produced.) Both links are available in a thread I started about ADOT Enforcement over on radioreference.com .

you can hear the ADOT traffic on the YRCS talk group channels well in southern Arizona. I'm down in Elfrida (on hwy 191) and can hear them at the house and also when I come up to Willcox. If they don't have a repeater on Mt Graham, I'm guessing they have one on Dragoon Peak (I-10 and MP 317) and another farther east

Cochise Sheriff either installed or updated a repeater on Dragoon peak and improved their VHF network. There is also a ham repeater up on Dragoon peak that you can hear quite well on I-10 and even down on Hwy 191.

just hoping we do not have any big fires. A few years ago the Chirachua mountains burned from the south to the the north and that was started by an illegal. The Forest service uses portable repeaters. depending on where the activity was happening sometimes it was easy to hear, other times if the traffic was over the peak and down in the valley you may be able to hear them but usually could hear the air units.

ADOT and ADOT Enforcement have all their radio sites co-located with DPS.
Check the site maps that are posted on this group's webpage.

I see them routinely along I-17 near the Cordes Junction area. I've been told they are actual sworn peace officers, and are post certified as Law Enforcement Officers. Good questions though! I look forward to hearing the answers.

Have you tried the Taylor Radio Shack? I manage the one in Payson and I have heard the new Radio Shack scanners are now becoming available. They are being made by a company that bought the patents from GRE when they went out of business. In my opinion it's better to buy new with full warranty, than to take a chance on somebodies used junk.
Taylor Radio Shack #928-536-7434

So far they have a 20 ch. handheld and desktop and digital handheld and desktop. The 20 ch. go for 99.99 ea. and the digitals 399.99 ea.

We are still waiting to see if they will have a 1000 ch. triple trunking available. at Radio Shack.

I monitor AOT on the YRCS (AKA - Southern Az Trunking System..LOL) only since I don't get out of the Valley often. Most of the "action: is running plates & DL's on traffic stops of both commercial & private vehicles. I have seen the units on Loop101 west side, Grand Ave & I-10 including between here & Tucson.

I ACTUALLY SEE THEM ALL THE TIME IN VARIOUS AREAS. THE CONCENTRATE IN METRO AREAS LIKE MESA AND PHX AND TUCSON ON LOCAL COMMERCIAL VEHICLES LIKE DIRT HAULERS AND LOCAL FREIGHT COMPANIES. IN RURAL AREAS THEY CONCENTRATE ON PORT OPS. INHAD A VERY DETAILED CONVERSATION WITH A AZDPS CVSS COMMERCIAL VEHICLE ENFORCEMENT IN MARANA RECENTLY AND THEY ARE FULL FLEDGED POST CERTICIED LAW ENFORCEMENT OFFICERS WITH THE SAME AUTHORITY AND JURISDICTION AS AZDPS OFFICERS. FOR THE MOST PART THEY PERFORM THE EXACT SAME TASKS AS AZDPS CVSS UNITS. THERE ARE A FEW SPECIALTY TASKS THEY CONCENTRATE ON THAT DIFFER SLIGHTLY FROM DPS. THEY DO FROM TIME TO TIME MAKE DOMESTIC TRAFFIC STOPS AND THEY CAN CITE FOR ANY VIOLATION THAT. ANY OTHER LAW ENFORCEMENT OFFICER CAN . NO DIFFERENCE. AND THEY DO AND THEY CAN. OFTEN THEY WORK SIDE BY SIDE WITH THAT OF DPS. I MONITOR THEM 24 HRS A DAY THROUGH TRAVELS THROUGHOUT THE STATE. AND I GET THEM CRYSTAL CLEAR STATEWIDE ON MY PRO 2096 OFF
OF THE MESA AND YRCS SYSTEM GROUPS. I HEAR THEM MOSTLY ON THE DIGITAL SYSTEM. I ALMOST NEVER HEAR THEM AT ALL ANYMORE ON VHF. FIGURED THEY ABANDONED THE CHANNEL. BUTT I SEE THEM EVERYDAY IN CENTRAL WEST MESA THERE VERY ACTIVE. ON THE I-10 CORRIDOR BETWEEN TUCSON AND PHX. I SEE THEM AROUND TUCSON AND YUMA ON ALMOST A DAILY BASIS. I HEAR THEM MAKING TRAFFIC STOPS STATEWIDE CRYSTAL CLEAR ON TG1109 ON YRCS SOMETIMES 400 MILES AWAY AS IF THEY WERE PARKED NEXT TO ME. HAVENT FIGURED THERE UNIT. DESIGNATION YET I HEAR CENTRAL UNITS IDENTIFIED OFTEN WHICH I BELIEVE TO BE UNITS IN THE PHX METRO AREA. BUTT IVE BEEN DEEPLY INTRIGUED BY THEM AND I KNOW SEVERAL AZDPS CVSS OFFICERS AND OFTEN I PLUCK THERE BRAINS FOR INFO. SO THATS ALL I KNOW FOR SURE AT THIS TIME. THX KEN

Hi Ken I know nothing about them other than my wife and I like to listen to whats going on in our area. Apache, Navajo counties and Snowflake-Taylor area..... We will be in Showlow on the 13th will stop at R/S and see what they have. What I have now is a pro-2014 that only gets the highway patrol now...The one that works is a pro-2027 there are so many model''s its gets confusing for this old man... What have you got that you may sell? THANK YOU Karl K.

My boss David Matthews also owns the radio shack in Show Low. I think he is getting in a new shipment of scanners next week. The handheld and desktop 200ch. for 99.99 I think will pick up everything there is to listen to in that area. I am pretty sure he can program it for you too.

18406. ADOT Enforcement

Yahoo group: ArizonaScanner (2013 — 2016)
Date: 2014-06-10 14:48:21 UTC
From: John H. Guetherman
Topic: 18406 Message: 18406

Ken, you said you listen to the EO's on both the YRCS and the Mesa systems. Are you saying that they are using one or more talkgroups on the TOPAZ RWC (Mesa) trunked system, as well as the YRCS trunked system? If so, what talkgroup(s) are they using? If not, please clarify what Mesa system you're referring to.

One other thing that I'm curious about, I haven't heard APB's/ATL's/BOLO's go out on the EO talkgroup. If they're patrolling the freeways, and have the same authority as DPS officers, shouldn't they be getting the same info that a DPS officer gets, if for nothing else, officer safety? If there's a wanted person, or an Amber alert, or a wrong-way driver, EO's should be advised of these just like any DPS officer is.

John
Peoria

IVE BEEN GETTING THEM SIMULCAST OFTEN ON YRCS. AND MESA EMERGENCY NETWORK NOT TRWC. THAT STATEWIDE SYSTEM STILL IN CREATION I MONITOR BOTH. AND IT APPEARS AS THOUGH THE TALKGROUPS ARE THE SAME OR SIMALIAR. AS FAR AS YOUR DPS QUESTION .ON THE ADOT ENFORCEMENT GUYS OR OFFICERS. I BELIEVE THEY HAVE FULL ACCESS TO THE SAME INFO DPS OFFICERS DO. THE HAVE MDTS IN THERE TRUCKS AND CARS ALIKE THERE COUNTER PARTS. I HAVE HEARD ATLS BEFORE ON ADOT ENFORCEMENT BEFORE. NOT AS MUCH AS YOU OTHERWISE DO WITH AZDPS. FROM MY OBSERVATION IT APPEARS THEY MOSTLY WORK KNOWN AS SPECIFIC WORK DETAIL. ALTHOUGH THEY SOMETIMES PATROL AND. IVE SEEN THEM AND HEARD THEM OCCASIONALY MAKE DOMESTIC TRAFFIC STOPS. AND ACCORDING TO MY AZDPS CVSS SOURCES THEY ARE 100% AZ POST CERTIFIED PEACE OFFICERS. WITH THE SAME AUTHORITY AND JURISTICTION OF THAT AZDPS OFFICERS. EXCEPT IT APPEARS THEY APPEAR TO CONCENTRATE ON SPECIFIC DETAILS. SIMALIAR TO AZDPS ASSIGNEMENTS. AND OFTEN MIRROR AZDPS
CVSS UNITS ONLY THERE AGENCY IS MUCH SMALLER THAN AZDPS. WITH FROM WHAT I UNDERSTAND THEY ONLY HAVE APPROX 50 UNIFORM CERTIFIED PATROL OFFICERS STATEWIDE. MAJORITY OF THEM ASSIGNED TO PORT OPERATIONS. AND THE REST DO SPECIFIC PATROL DETAILS. SO THATS ALL I REALLY DO KNOW FOR NOW. BUTT THE OTHER SYSTEM WAS MESA EMSS SYSTEM THAT I REGULARLY CATCH THEM ON.

18408. Re: [ArizonaScanner.com] ADOT Enforcement

Yahoo group: ArizonaScanner (2013 — 2016)
Date: 2014-06-14 18:35:23 UTC
From: Richard Gaun
Topic: 18406 Message: 18408

Yesterday afternoon an AOT Unit pulled up next to me while I was waiting for the light at Grand Ave & Primrose St in El Mirage. It was a marked Chevy Tahoe white with black stripe and lettering and had a low level light package (IE: no light bar). Officer was in full class A uniform, dark blue or black (got to be hotter that hell) and the unit had a MDT. Couldn't get a pic as the light turned green and it was time to put the pedal to the metal, slowly of course I can't afford the ticket....LOL

Thanks Ken. I'm not familiar with the Mesa EMSS system. That's not the mobile Mesa system, is it? I thought that was based in a command van, and deployed on large incidents. Can you post the info for it? Frequencies, and all?

What system are you referring to when you mention "Mesa EMSS" where you are hearing ADOT Enforcement? Is this system identified in the Radio Reference database? If so can you post a link. If not, please post the frequencies so we can help with identifying talkgroups and users.

Best Regards,

18418. Mesa and surrounding area listeners

Yahoo group: ArizonaScanner (2013 — 2016)
Date: 2014-06-23 21:59:28 UTC
From: John H. Guetherman
Topic: 18418 Message: 18418

I'd like to ask listeners in Mesa and the immediate surrounding area to listen to this radio system, and report back any findings.
This system is supposed to be only used in emergencies, or for training exercises, but it is possible that it is activated on a somewhat more regular basis, although still sporadically.
It may also be patched to other established systems.
If more people could monitor it on a regular basis, we may be able to confirm if any of this is correct.

http://www.radioreference.com/apps/db/?sid=7176

Thanks.

John

Topic: 18423 Message: 18423

Anyone listening to Phx Fire Disp Ch1?

I know what Emergency Storm Deployment is, did someone catch exactly what the dispatcher just said???

Something like City of Phoenix is now on emergency deployment. All non essential EMS and I couldn't hear it after that.

Most Phoenix FD units now on calls.

Thanks
Dave

This was as close as I could transcribe.

Attention all personnel, the City of Phoenix is on Emergency Deployment
Type Number One. Response requirements will be adjusted accordingly in
CAD for for all non EMS calls no ETA for Utilities will be given.

Thatt was the first time I have heard that one too.

Roy

From: ja moran
Topic: 18423 Message: 18426

during the storm Thursday night I popped up flightaware and noticed that the flight paths being flown were unusual. Aircraft were being held and circling near Blythe and also about 30 miles northwest of Phoenix at a an airspace fix known as HOMRR (you can look this up on airnav.com)

the Phx Sky Harbor airport also stopped taking landings and takeoffs for a bit due to debris on the runways.

Aircraft coming in from the east usually go over San Simon near the AZ/NM border then up towards Stanfield. On Thursday, they were flying close to Douglas, then west of tucson before flying between two storms to Stanfield then into Phoenix. a few aircraft diverted to either Las Vegas, Nv or Tucson. Usually from the Phoenix area you can hear 125.4, 125.25, 135.8, 135.15, 128.45 center frequencies as well as the Phoenix approach and tower. You can also hear the airport operations and maintenance on the Phoenix city network.

when you have storms coming in monitoring the aircraft frequencies often can give an indication of a storms strength and movement

Interesting post. Thanks for sharing. I saw very strong S-SE winds that evening in "the South of Scottsdale". De-shingled a neighbor's roof.

See
http://www.azcentral.com/community/tempe/articles/2009/07/19/20090719emergency0719-ON.html
for a newspaper article about a 2009 implementation of Deployment Type 1.
Perhaps this is implemented by the Deployment BC to reduce the number of
units sent on each alarm when call load requires. I suppose this is a step
up from Emergency Storm Deployment.

18431. RE: [ArizonaScanner.com] Re: Deployment

Yahoo group: ArizonaScanner (2013 — 2016)
Date: 2014-07-07 05:47:28 UTC
From: Ed (K9EDK)
Topic: 18428 Message: 18431

There have been, over the years, different means of “emergency” deployment, and they’ve come with different names and levels. Emergency Deployment is designed to put more units on the road by splitting crews and sending reduced assignments to certain types of calls. While in any level of emergency deployment, the dispatchers are able to override the reduced assignments should they get information that would justify it. I haven’t had the opportunity to look at the storm deployment announcements that channel 1 makes in many years, so I don’t know if they’ve been changed over the years. The last storm I worked on channel 1 was probably in the early 2000’s. The SOPs are available to anyone online at www.phoenix.gov/fire under publications. Volume 2 will probably explain it the best. Search for “emergency deployment” and you’ll see the current levels and what changes from normal deployment. https://pilot.phoenix.gov/firesite/Documents/074781.pdf

Hope this helps.

Ed

This was as close as I could transcribe.

Attention all personnel, the City of Phoenix is on Emergency Deployment
Type Number One. Response requirements will be adjusted accordingly in
CAD for for all non EMS calls no ETA for Utilities will be given.

Thatt was the first time I have heard that one too.

Roy

Date: 2014-07-26 19:31:43 UTC
From: Tom Humes
Topic: 18319 Message: 18437

to all on the net

I have an uniden 396T
When I enter the PL tones for the freqs desired, will the PL tones be used or not
For Instance:
DSP 155.475 PL 141.3 for VAIRS1
Will hear the transmission for 155.475 PL 110.9 for VAIRS3 also
If so why would I need the PL tone
The reason for this inquiry is that there are a number of freqs for many locations that have multiple freqs with assigned PL tones for a variety of locations. If the PL is not needed then I can eliminate a whole lot of freqs that are duplicated.
Thanks in advance for the help.

On Friday, March 7, 2014 3:12 PM, Joe Badura <joebadura@hotmail.com> wrote:

Considering that Navajo Co is all Analog conventional today, they are probably just planning to purchase P25 capable radios. If they are planning to replace the infrastructure, then you will likely see P25 conventional that any of the Digital Scanners that are P25 capable can monitor. Keep in mind if they implement P25, it is just a few dollars more to get some encryption capabilities that no scanner can monitor.

I doubt they would be considering a Trunked system unless they plan to jump on the statewide system once it gets built there. If they do decide on trunking, hit up the group again in the future, and we can talk more once they have chosen a trunking technology.

If you listen outside of Navajo County, then the BCD396XT will let you listen to almost every Public Service radio system throughout the state (with the exception of P25 Phase 2, LTR Passport, and MOTOTRBO). If you need to monitor Pima County, SRPMIC, any up and coming P25 Phase 2 systems, then go for the BCD436HP.

I live up north in Navajo Co. Today they put in the daily rag the planning for P25 that is being put forward. They are at least a year away. My question is for filing in my records only. What is on the front burner as to what the possibilities of systems and standards that I should expect. I know that is a loaded question but only have my barrels are working.

I'm not talking
in semantics but real world systems.
'M' made their own interpretation of the Phase
1 specs, and a number of features they implemented were NOT
to the final spec.

So, other manufacturer's radios don't work on
a Motorola P25 P1 system like they would on any other
manufacturer's infrastructure.

When you say that you tested Motorola, Tait and
Harris, were your referring to the infrastructure?

Or the subscriber units on a Motorola infrastructure?

As you can tell, I have no love for anything 'Big
M'.
The agency I worked for got taken by them a number of times
over the years.
And I've watched them do similar things to a lot
of other agencies of varying sizes across the country.

Maybe now that they've gotten rid of the
cellphones, they'll take a better approach to Public
Safety, but I'm reserving judgement.

wrote:

Actually we have tested Motorola, Tait,
and Harris radios. We chose Motorola, but that choice
was ours, not forced. Really not wise to criticize a
system that you know NOTHING about.
The P25 Phase 2 TDMA MAC and P25 Phase 2 TDMA
Physical layer have long been approved. The completion of these
standards (TDMA Physical Layer TIA-102.BBAB and TDMA MAC
Layer TIA-102.BBAC) has enabled manufacturers to develop P25
Phase 2 TDMA Trunked equipment. This is NOT X2-TDMA,
but Phase 2 TDMA standard equipment. Motorola has been
shipping Phase 2 TDMA equipment for a few years now.

With the MAC and Physical Layers set, there is ZERO
likelihood that ANY Phase 2 TDMA system has anything to
worry about.

Just like the 802.11N routers that came out
before N was finalized, they ALL work.

Semantics really has no value when we are
discussing what is happening in reality.

On Thursday, March 6, 2014, Walter Howard <walter.howard.jr@...>
wrote:

What you got was
Motorola's interpretation of the framework for Phase 2,
since the standard hasn't been finalized.
Just like for Phase 1.
Most likely will only allow "M" radios to
work on it. Another expensive 'sole source'.

On Thu, Mar 6, 2014 at
1:05 PM, Jim Myers <kd7eir@...> wrote:

I find that rather amazing since our PCWIN
P25 Phase 2 system is working quite well for a non-existent
standard.

Hi Tom.

If you set a PL tone on a channel, the scanner should not receive a signal on that channel unless it has a matching PL tone. It's been a while since I had the radio model but it sounds like something is set wrong. For example, you may have tone search activated. If so, it will stop on the channel regardless of the tone you set and will search for and display the tone actually being used on a transmission.

That being said, you don't have to use PL tones at all, unless you live in an area that may pick-up transmissions from two areas (each using its own PL tone) and you want to filter out one of them. This is relatively rare because agencies tend to use different frequencies for adjacent areas.

For DPS, I don't bother with PL tones. In fact, I don't use them at all. You should also know that there use has a slight cost: You may miss a small portion of the beginning of transmissions and the signals are very weak, you may miss the entire transmission.

Bottom line: Use them only if you need their filtering function.

Good luck.

Gastón

Tom,

Gastón is correct, you only need to enter the tones if there is a second user on that frequency that you do not want to hear. You might want to enter a single frequency into two or more channels along with the individual agencies PL/DPL along with an Alpha Channel label so that you know what agency is talking.

Gastón also has a good point that use of PL/DPL can come at the cost of missing some transmissions due to weak signals as well.

If you set the channel to PL Search then the radio will open on any transmission and display the decoded PL or DPL. This will help you identify the station when multiple PL tones are used.

I think you can tell if it's in tone search mode if the tone number blinks when a transmission is active.

Been monitoring the Salt River Pima Maricopa Indian Community Fire and Police on UHF for several years but this apparently came to an end Monday. There was an announcement of a "roll call" on UHF saying they were switching over to the new radio system. Haven't heard any activity since other than a repeater ID. Assuming they went digital on 700/800 MHz?73, Dave

They have moved over to a new P25 Phase 2 system.

http://www.radioreference.com/apps/db/?sid=8003

No talkgroups have been positively ID'd yet, but it sounds like PD is using talkgroups 7xxx that are encrypted and fire using talkgroups 8xxx. If anyone is able to ID any talkgroups, please submit the info to Radio Reference.

Thanks for confirming my suspicions, Joe. Guess I won't be monitoring them anymore as I don't have Phase 2 capability and have never had really satisfactory reception of any digital system on a consumer scanner. Time to repurpose and reprogram the BF-888S that I had been using to listen to them for something else. :(

Dave

Gila River Indian POlice is also on 860 Mhz frequencies. You sometimes hear the fire/EMS dispatches or on 453.975

I also noticed this weekend a lot of "hash noise" on the cochise county Sheriff frequency 155.04 I know CCSO recently upgraded their repeater network and installed some additional repeaters for better coverage.

I have a REgency MX-7000 20 channel analong scanner as well as the Uniden BC396 trunk tracker that does receive the P=25 butis not able to decode the Phase II stuff... I guess this an an excuse to get a new radio, another toy.

On another note... One of my radios does a good job of receiving HF or shortwave signals, I connect that one to the CB or 10M antenna on my truck and can get Radio clear reception of Radio Australia or Radio China. The international stuff is fun to listen to along with the scanner traffic...

18460. 460.1875 151.4 PL --> DPS?

Yahoo group: ArizonaScanner (2013 — 2016)
Date: 2014-09-14 23:03:58 UTC
From: joebadura@...
Topic: 18460 Message: 18460

I'll cross post over here, since this group seems to be more active when talking about DPS frequencies. (I also posted this in Radio Reference Arizona Forum)

For 5 years I have had 460.1875 programmed in my everyday scan list. This freq is listed as DPS "Ch 7 Phoenix Metro North Patrol" in the Southwest Frequency Directory. Until this last week, I have never heard anything on this freq. Last week I heard was sounded like radio techs talking about antennas and SWR on 460.1875 with a PL of 151.4 (a common DPS PL tone). I cannot verify what I heard was DPS. It is a repeater, and I heard some repeater keyups today on the freq too.

Has anyone else heard this frequency? Anyone have any information on possible DPS frequency changes for the Phoenix Metro area in the near future?

Walter, any comment? ;)

you can try the Scottsdale Airport frequencies, clearance, tower, ground, and the Phoenix TRACON they are easy to get airnav.com then enter PHX or SDL
129.55 I think is the Delta Airliens company frequency you can hear interesting stuff there sometimes. I am not sure what America West/usair or American use I don't have my directory book handy

between 464.00-465.0 always something interesting and on the 463.0-463.3 medcom channels you can hear interesting stuff..

18476. Comic Convention Freqs!

Yahoo group: ArizonaScanner (2013 — 2016)
Date: 2014-10-27 22:55:54 UTC
From: kb7aqd Homuth
Topic: 18476 Message: 18476

Found my notes from the last Phoenix Comic Convention at the Phoenix Convention Center June 4, 2014.

451.4875 Chase stadium ops.
457.6375 Maintenance
462.0625 Unid voice comms
462.2125 Unid voice comms
467.2125 "Line Control" volunteers at Comic Con

Saboten Comic Convention, Westgate, Glendale:

457.7125 Janitorial
462.1250 Security ops
467.5250 Security ops
467.9250 Hotel security at Renaissance Resort
468.2625 Clothing store at Tanger Outlets
468.5125 Arena security...warning kids not to horseplay on escalators.
469.8250 Janitorial
469.9375 Voice pager: "Take to upper concourse...." female voice, roger beep.

Radios: Uniden BC75XLT with Close Call and preprogrammed business UHF "Dot" and "Star" channels, along with FRS/GMRS UHF, and MURS 151/154 MHz channels.

Yaesu FT-277 with short rubber duck.

Dressed in orange polo shirt, carried orange clipboard. Many of the comic fans liked my "costume". No one questioned my scanner nor HT, as it was part of my costume! Many of the guests were at least aware of ham radio and scanning, or knew a "friend of a friend" who was a ham or scanner listener.

Did you submit these to Radio Reference? That seems to be a more permanent place to keep finds like this rather than an e-mail list. I submit a lot of business operations stuff there so if you’re worried about them only caring about public safety frequencies, they take business stuff as well.

technology is nice when it works! ---
try the traditional mall frequencies464.5, 464.25. 464.75
you find this same group of frequencies being used at Disneyland and amusement parks.
now sure how Disneyland can call themselves an "amusement" park as I am not amused at the small fortune they now charge just at the entry gate...

I have the frequencies in a D-Base database that worked om MS-DOS but now the MS-OS does not want to open I think I can open the dbf file with open office and possibly convert that to something else One reason why I work on UNIX and avoid Microsoft anything.

I find the FCC’s database to be pretty accurate for figuring things like that out. Scottsdale Fashion Square has two current licenses (the second one seems to be expired though):
http://wireless2.fcc.gov/UlsApp/UlsSearch/licenseFreqSum.jsp?licKey=1781464
<http://wireless2.fcc.gov/UlsApp/UlsSearch/licenseFreqSum.jsp?licKey=1781464>

Individual stores would have their own licenses and would not be covered by the mall's licenses below.

18488. Scottsdale Fashion Square

Yahoo group: ArizonaScanner (2013 — 2016)
Date: 2014-11-14 00:43:44 UTC
From: kb7aqd Homuth
Topic: 18482 Message: 18488

Try these standard Motorola HT frequencies:

464.500
464.550
467.7625
467.8125
467.8500
467.8750
467.9000
467.9250

VHF:
151.625 151.955 154.515 154.540 154.570 154.600

I used my FT277 Yaesu HT for the UHF monitoring, and a Uniden BC75XLT for VHF/UHF listening. Recently, the eastern end of the mall all the way out to Scottsdale Road suffered severe white noise RFI across the UHF band. Staff from various stores had to repeat their orders and requests more than once to get through, so it wasn't just my scanners.

Try out the FRS/GMRS 462/467 MHz frequencies for other businesses and customers.

what I monitor depends on where I am
In the Phoenix area usually the Police, fire, and Highway PatrolIf I am heading south then the Highway patrol and Pinal and Pima County sheriff and police (Casa Grande, Tucson, Eloy PD, Gila River PD) In Cochise county, the Highway patrol, fire dispatch, and the Police from Sierra Vista Willcox, and Benson.

Cochise County upgraded their repeater network so now it's easier to hear them
when ther are fires the forest service, and when you can hear them, the Border Patol, CBP often is encrypted.
I also like listening to the ATC traffic from the Alberquerque center, Phoenix or Tucosn as well as form DMAFB, Davis Monthan in Tucson.
I am close enough that I can get the New Mexico frequencies except that the Chirachua mountains block some of the signals. Occasionally there is traffic from Mexico in spanish on some VHF frequencies

I like to listen to anything and everything.

I have a handheld scanner that has the ability to find frequencies in use when someone transmits nearby. I've figured out a lot of business frequencies that way.

At my work we used to have a Kenwood LTR system that I had pretty much all of the talkgroups mapped out on. Earlier this year we switched over to a TRBO/DMR system but I don't have anything at the moment that can decode TRBO/DMR trunking and talkgroups. I think I can piece something together with an SDR and some specialized software but I haven't tried that yet. I was really hoping that Uniden's scanner that they released a couple of months ago would have the ability to decode TRBO/DMR but it did not.

Since just about anyone can edit a Wikipedia page, and it stays that way
until someone else comes along and edits it, I suspect that's the name of
the girlfriend of the guy who thought it'd be funny to edit the PFD
apparatus page. Or something. You should go change it back to Greenberg
Response 1.

18509. Scanners for sale: Phoenix area

Yahoo group: ArizonaScanner (2013 — 2016)
Date: 2014-12-23 04:30:17 UTC
From: Ed (K9EDK)
Topic: 18509 Message: 18509

ALL of the scanners listed are working perfectly, no excessive wear/tear, all displays work perfectly as well. Two of the three radios come in their original box with all original cables, brackets, etc.. BCD996T scanners are still selling for over $300 used and the BCD396T is still going for close to about $200, so my prices are designed to sell, and I'll consider any REASONABLE offer.

I have two BCD996T scanners for sale. The first one comes with everything that came with it originally, including the box, all cables, mounting brackets, etc. This radio spent most of its life in the house, mounted on my desk and looks like new. No cosmetic blemishes, no scratches, no dings. I would consider this radio to be like-new condition. I'm like $275 for this radio.

The second BCD996T is also in great working order, but has been mobile and shows a little bit of wear, scratches/blemishes, very minor, no damage to the display, all knobs and buttons function normally and there is no wear on the buttons. The blemishes are not on the face of the radio at all. Aside from a few cosmetic issues, this radio is in great condition. I cannot find the box for it, and it does not come with a programming cable, which is probably safe and sound in the box, wherever that may be. The serial cable for this radio costs about $15. I'm asking $260 for this radio.

The third scanner is a BCD396T, handheld. It is in great condition. It comes with everything it came with when it was new. This radio, like the first 996 listed, has spent most of its life on my desk and looks like new. I'm asking $150.

All of these scanners work fine with most radio systems in the state, with the exception of Phase II P25, which, as far as I know, is only being used in Pima County and by the Salt River Indian Community, east of Phoenix.

If you're interested in any of these radios, or have any questions, don't hesitate to contact me directly at k9edk@.... If you want to see pictures of the radios, they can be found at www.k9edk.com/scanners

Hi David,

If I didn’t already have one of each of the scanners Ed is selling, I’d have already spoken for one. I really like the BCDx96 series, and I’m sure Ed has very logical & comprehensive programming in them. Good luck & Happy Holidays.

Here is a holiday serving tip for you - serve Eggs Benedict on a hub cap, because there's no plate like chrome for the Hollandaise.

18512. holiday toys (scannners and radios)

Yahoo group: ArizonaScanner (2013 — 2016)
Date: 2014-12-23 18:47:14 UTC
From: ja moran
Topic: 18509 Message: 18512

was looking for the new unixen Home Patrol handheld scanner... found about a $100 price difference between the low end and high end. a site called factorystore.com had the low end.
they had the radio but not the GPS and other options. I can get those from another source later....
I need a few more "toys" for my truck. I am also looking at a portable printer for my laptop. I have an inverter in the truck and just replaced the factory battery with a one that is a bit bigger (850 vs 750 cranking amps) Once I get a 6m/2m/220/440 radio I can couple that with the 2m/440/1300 I have and be able to work everything except HF.
Right now I often use the one radio to listen to Shortwave broadcasts when i drive into work.
On Friday's and Sundays I drive to or from southeastern Arizona and the Phoenix area. The highway patrol district 6, 8, and 9 cover a wide area and sometimes are busy. at night they combine frequencies and on one frequency you can hear activity for much of the southern part of the state...D9=460.325 D8=460.425 D6=460.025 460.325 as well as 460.30, 460.5 and 460.475 are used around Phoenix depending on where you are
Cochise County Sheriff is usually active on 155.65 Pima sheriff and Tucson went to a new system, that's made me buy a new scanner... the YRCS system has good reception over most of Cochise county and southeastern Arizona.

sometimes you can hear the border patrol when they are up on the sheriff or DPS frequencies.

Maricopa, AZAny spelling errors are courtesy of Samsung handheld techmology.On Dec 22, 2014 8:30 PM, "'Ed (K9EDK)' k9edk@... [ArizonaScanner]" <ArizonaScanner@yahoogroups.com> wrote:

ALL of the scanners listed are working perfectly, no excessive wear/tear, all displays work perfectly as well. Two of the three radios come in their original box with all original cables, brackets, etc.. BCD996T scanners are still selling for over $300 used and the BCD396T is still going for close to about $200, so my prices are designed to sell, and I'll consider any REASONABLE offer.

I have two BCD996T scanners for sale. The first one comes with everything that came with it originally, including the box, all cables, mounting brackets, etc. This radio spent most of its life in the house, mounted on my desk and looks like new. No cosmetic blemishes, no scratches, no dings. I would consider this radio to be like-new condition. I'm like $275 for this radio.

The second BCD996T is also in great working order, but has been mobile and shows a little bit of wear, scratches/blemishes, very minor, no damage to the display, all knobs and buttons function normally and there is no wear on the buttons. The blemishes are not on the face of the radio at all. Aside from a few cosmetic issues, this radio is in great condition. I cannot find the box for it, and it does not come with a programming cable, which is probably safe and sound in the box, wherever that may be. The serial cable for this radio costs about $15. I'm asking $260 for this radio.

The third scanner is a BCD396T, handheld. It is in great condition. It comes with everything it came with when it was new. This radio, like the first 996 listed, has spent most of its life on my desk and looks like new. I'm asking $150.

All of these scanners work fine with most radio systems in the state, with the exception of Phase II P25, which, as far as I know, is only being used in Pima County and by the Salt River Indian Community, east of Phoenix.

If you're interested in any of these radios, or have any questions, don't hesitate to contact me directly at k9edk@.... If you want to see pictures of the radios, they can be found at www.k9edk.com/scanners

correct the oldsr P25 capable scanners do not pick up P2 as it was concieved and released after the older radios were manufactured.

just bought one of the new Uniden radios and coupled it to a GPS. This is nice now when I go somewhere I do not need to switch frequencies...
On I-10 the I usually have to switch from 460.325 then 460.2 then 460.025, then 460.425 then back to 460.325 once in Cochise County. the older radio I usually let scan or park on the sheriff channel
Last week there was a chase for a carjacking that happened in willcox. the stolen hummer went east then south then east again towards the chirachua national monument area, the guy eventually took a road that dead ended at the foot of one of the mountains. the DPS ranger helicopter came from Tucson then later went back to Tucson.
what they need is a model airplane or helicopter that will fit in the trunk or back of the patrol vehicle. Equip this with a camera to send back real time video. A hobbyist can do this for not that much but when government does it, the thing becomes a drone and costs millions of dollars technology is nice when it works! ---

That is correct. Tempe PD is Phase I on the RWC. I'm in Tempe and I can confirm that. There is talk about RWC going to Phase II, but it involves quite a bit of modifications and new radios, which cost a small fortune. Don't expect to see it anytime soon. Phoenix thinks they have money to spare, so they may switch. The smaller communities can't afford it, so they may well be way behind Phoenix, if/when they switch.

Hi Ken,

Are you aware of the class action lawsuit against Uniden, apparently involving missing promised features in the BCDx36HP series? I have to wonder if that may be why the selling prices seem to be dropping. Good to know you are pleased with it. So much so, apparently, that you felt the need to shout about it.

I ordered a BCD436HP from Amazon when they first came out ($539 ish then, currently $439.95). It had an issue, so I returned it, but I thought is seemed a bit plasticy, especially compared to the BCD396 series, which I really like, especially the smaller size. I also have a Home Patrol 1, but I'm under impressed with its ease of use (I seem to prefer lots of buttons). Considering that the BCDx36 series are sort of in the same family, they appear to be a bit more traditional and better in their operating features.

Cheers,

Dennis, et al.

I now have a 436 and two 536's and I just love them. As far as the class action against Uniden is concerned, I don't expect to see anything result from it. The prices are still pretty much in line with where they've always been. Bargains can be found, but I paid $459 for my 436 several months ago, and my first 536 cost me a little over $550. I got a better deal on Cyber Monday for my second 536.

These are, in my opinion, the best radio Uniden has put out that does P25. I can hear P25 Phase I and Phase II just fine (Salt River Indian Community), loud and clear. The reception on both models is great, at least here in the Valley. When I went to New York (flew) a few months ago, I wasn't all that comfortable on how to operate the radio, but from my experience on that trip, it worked flawlessly. I haven't done any other travelling with these radios, but an upcoming driving trip to Seattle should tell the story. I'll use the GPS to track my location. I'd recommend these radios to anyone, and have.

Ed

Hi Ken,

Are you aware of the class action lawsuit against Uniden, apparently involving missing promised features in the BCDx36HP series? I have to wonder if that may be why the selling prices seem to be dropping. Good to know you are pleased with it. So much so, apparently, that you felt the need to shout about it.

I ordered a BCD436HP from Amazon when they first came out ($539 ish then, currently $439.95). It had an issue, so I returned it, but I thought is seemed a bit plasticy, especially compared to the BCD396 series, which I really like, especially the smaller size. I also have a Home Patrol 1, but I'm under impressed with its ease of use (I seem to prefer lots of buttons). Considering that the BCDx36 series are sort of in the same family, they appear to be a bit more traditional and better in their operating features.

Cheers,

Dennis KD7CAC

correct the oldsr P25 capable scanners do not pick up P2 as it was concieved and released after the older radios were manufactured.

just bought one of the new Uniden radios and coupled it to a GPS. This is nice now when I go somewhere I do not need to switch frequencies...

On I-10 the I usually have to switch from 460.325 then 460.2 then 460.025, then 460.425 then back to 460.325 once in Cochise County. the older radio I usually let scan or park on the sheriff channel

Last week there was a chase for a carjacking that happened in willcox. the stolen hummer went east then south then east again towards the chirachua national monument area, the guy eventually took a road that dead ended at the foot of one of the mountains. the DPS ranger helicopter came from Tucson then later went back to Tucson.

what they need is a model airplane or helicopter that will fit in the trunk or back of the patrol vehicle. Equip this with a camera to send back real time video. A hobbyist can do this for not that much but when government does it, the thing becomes a drone and costs millions of dollars

technology is nice when it works! ---

Hi Ed,

Thanks for your comments. I certainly appreciate & respect your opinions. I just ordered a BCD536HP and will likely end up with a BCD436HP also. But I'll not likely forsake my BCD396XT anytime soon.

Is that Siri's sister on PFD dispatch? Seems they could use to put an underscore character or several spaces between the alpha & numeric characters in her script for the channel designators - i.e. A9 sounds like a single syllable, hi. Maybe she's trying to beat your record for rattling off numerous apparatus designators is a single breath. Hum, I guess she doesn't need to stop to catch her breath, being she has the unfair advantage of being inanimate.

Dennis,

When you mention a "class action lawsuit" against Uniden, are you referring to the guy who spent $9 on a domain name and built a website to tell the world how mad he is that some features aren't available yet and threatening to sue Uniden? Or have you heard of someone who has actually hired a lawyer and filed a lawsuit?

Of course aggrieved consumers taking to the internet and claiming "they'll sue that company!" is nothing new. I did some Google searches and was only able to come up with the usual consumer complaints and idle threats to file a lawsuit (no actual lawyer engaged, of course). I am curious if you have heard that there is now a lot more to it than that, that I am not finding.

Thanks,
Dan

Her name is Samantha. As mispronunciations come up, they're supposed to be addressing them. It appears that after running for nearly a month now, they are no longer reporting mispronunciations, and they're not getting fixed. Another thing that she can't do is change the inflection in her voice like a human. Sometimes the urgency of a dispatch can be emphasized simply by changing the "urgency" in your voice, without ever saying anything to spill the beans where everyone can hear it. It's not my problem anymore. If they want to sound unprofessional, they've succeeded. I find it difficult to listen to her.

Contact me directly before you purchase another x36 radio. I finally sold my other radios (396 and two 996's).

Hi Dan,

Long time no eyeball. I hope things are well with you. I suppose I could have guessed that all that legalese on here might draw you out, hi.

No, nothing concrete to report. I only recall running across something a few months ago that suggested that some moderate effort had been mounted. I suspect that you are right in that it’s a non-event. But it does seem that Uniden is well behind the curve on delivering the promised remote capable app.

Cheers,

I've traveled to southern Ca so far and all 4 corners of Az with my 536. Don't have the GPS feature it was too much over the price tag I paid 675.00 bearcat whose. I just do the zipcode feature which works well. Can't get RIVERSIDE CO. THOUGH ATLEAST EAST CO ITS ENCRYPTED. GILA RIVER PD PATCHY AND MARANA SILENT. EVERYONE ELSE INCLUDING ALL OF THE BORDER PATROL AND MULITIPLE OTHER FEDERAL AGENCIES THAT I LOST ON.MY PSR600. I GET CRYSTAL CLEAR. SO FOR NOW IM KINDA PIG IN SHIT MATTER OF SPEAKING EXCUSE THE LATIN. BUTT IM HAPPY. BEEN A SCANNER BUFF GOING BACK TO THE 70S.

Can't speak about any lawsuit that I'm aware of;And honestly I'm really not interested in what the lawsuit is about.I'm more about what directly effects me in the functions or likes or preferences in a scanner. Does everyone have to agree with it,of course not.I'm an old school ,old fashioned scanner enthusiasts that prefers up until now a scanner that I can control and set to my preferences.and yes buttons.I personally don't like scanners that just have neutral screens or formats that just monitor at random to a particular area.that's why after looking into the specs of home patrol I was less interested in that type of scanner.is the 536HP Perfect " No.like any radio there's gonna be issues' And yes there are a few features I still don't fully understand butt like anything in life its a work in progress.All I was saying I personally like this scanner. And love its features. So I chose to incert my opinion. THX Ken.

Thanks for keeping it civil Kenneth, it is appreciated.

People, remember your manners here. This is supposed to be a friendly group here, and not a spelling or grammar police action. Please try and read what is being said without interjecting comments on grammar, all capital letters, sentence structure and what have you. This is, after all, a hobby forum that is supposed to be a fun exchange of ideas. Lets try and keep it that way, shall we.

Most members posts here are not moderated, but they can be if needed.

Thanks for everyone's cooperation and understanding.

Patches take up valuable resources in a trunked system.

The article also mentions '500 to 600 radios for cache deployments'.
That negates the need to patch into conventional frequencies.

heard on RWC
this morning some chatter about he Governor and the Phoenix Convention center...
I amagine there will also be 464mhz frequencies in use that are commonly used at events464.25, 464,5, 464,525, 464,575 and a few others in this common range
the media channels between 451 and 453 and 455-456 will probably also be active...
I am going to be at my farm in southeastern Arizona where I will hear more about U of A and Valley Union than anything happening in Phoenix (Valley Union High School is in Elfrida and one of the stat's top ranked Basketball and football teams in their division)
a couple of weeks ago someone car jacked a hummer from the NAPA in Willcox, Border Patrol,Highway patrol and Cochise sheriff evantually caught the guy in the Chirachua national Monument area after he drove down a dead end road that ran into the mountain.

Morning All,

I find that it is increasingly common that folks who make their home in the "Valley of the Sun" are unfamiliar with the vast majority of the state beyond the 3 most mentioned "other places" Tucson, Flagstaff & Sedona.

Tucson & Phoenix are anomalies within this state. The overwhelmingly majority of the state is better represented by places like Casa Grand, Show Low, Clifton, Springerville, and Wickenburg.

You folks up there in the great state of Maricopa County need to get out more and explore the rest of the state.

Hi Donnie,

Sorry, I didn’t recognize the call. Yes, I know all too well what you are saying. I would have liked to come down for the Sandhill viewing event, but I found out too late to plan for it, and JA Moran didn’t mention having a spare bedroom, hi. There are many places in the state that I’d like to explore, but those two darned four letter words - life & work - keep getting in the way. I’d really like to find somewhere else in the state to take up residence that has similar weather to our area, w/o being surrounded by constantly barking dogs. Maybe you’d like to plan an event for down your way that a few of us townies could come down and participate in. I think a fellow motorcyclist ham still lives in the Ft Huachuca area and I’d like to look him up sometime. I did come down and tour the base MARS comm room several years ago, after picking up a now SK ham in Benson. You can probably guess who I’m referring to. Please post if you are aware of any worthwhile events down that way.

I love living in Cochise county. lots of room, friendly people.... and no one to complain about the birds or anything I may build. I raise poultry. My place is on Hwy 191 and a border patrol checkpoint is about a mile north on hwy 191.

when i get the west and south additions to the house finished I will be able to park two pickups on the first level and have a den, office, and additional bedroom and mini kitchen on the second level ----------

someone said to me when I was looking for property "what part of "the valley are you interested in.. I mentioned that there are several vallies (moon valley, deer valley, paradise valley Rainbow Valley... now when I say to some I live in he Sulphur springs valley or Elfrida they say "where's that"

I like the new uniden radio with the GPS feature.. It automatically goes from the Phoeenix area stuff to Tucson/pima county, then Cochise County and Hidalgo county New Mexico tonight when I went to Willcox the close call kept finding something around 910 MHZ, don't remember hte exact frequency because I was driving... wondering if this is the utility and smart meters ..

Subject: Re: [ArizonaScanner.com] Interesting article on Superbowl Public Safety Comms

  I did indeed send a comment... Juno & Yahoo Groups sometimes don't play well together!... Here's what I wrote this morning..... **********Morning All, I find that it is increasingly common that the folks who make their home in the "Valley of the Sun" are unfamiliar with the vast majority of the state beyond the 3 most mentioned "other places" Tucson, Flagstaff & Sedona. We must all bear in mind, Tucson & Phoenix are anomalies within this state. The overwhelmingly majority of the state is better represented by places like Casa Grand, Show Low, Clifton, Springerville, and Wickenburg. You folks up there in the great state of Maricopa County need to get out more and explore the rest of the state.

18554. Watch live air traffic over Phoenix doing Super Bowl Sunday

Yahoo group: ArizonaScanner (2013 — 2016)
Date: 2015-02-01 04:35:10 UTC
From: Brian
Topic: 18554 Message: 18554

Watch live air traffic over Phoenix doing Super Bowl Sunday.
Select the "US - Chandler AZ" receiver under the Menu option.
(In the upper right corner on the map, Click on the green arrow to view the Mode-S list)

The military refueling tankers, DHS aircraft, Blimps, should be listed on the Mode-S list on Sunday.
(If they're flying on Sunday)

And whoever else is flying over Arizona doing Super Bowl event.

BuTel ARC250 software will work for you
I have BuTel for my 396 and it works great.
If you live near me I will volunteer to program it without the BuTel
unless you wanted to purchase it yourself.
I live in Snowflake-Taylor, AZ

18567. Peoria Sports Complex?

Yahoo group: ArizonaScanner (2013 — 2016)
Date: 2015-03-07 23:32:09 UTC
From: kb7aqd Homuth
Topic: 18567 Message: 18567

460.350 with 203.5 PL

March 7 around 3:00 PM

Many operators around special event.

Names mentioned: Rio, PJ, Ed and "Operations"

They spoke about "Arrowhead Grill" and someone dropping a shoe under bleachers.

I was using an Alinco DJ-S45 HT with a Smiley 70cm halfwave duck.
Since 460.35 was an old Peoria PD frequency, is this the Peoria Sports Complex?

Date: 2015-03-15 18:08:38 UTC
From: Glenn Mitchell
Topic: 18571 Message: 18571

Common digital emission codes are now in bold. Emission codes associated with P25 Phase II now say "(P25 Phase II)". This is only data off of the license, it does not mean that a license will be Phase II next week. There are several sources of emission codes on the web including this one from our friends at Radio Reference:
http://wiki.radioreference.com/index.php/Emission_Designator

Have a good weekend!

18576. UNiden BC 436-HP great radio

Yahoo group: ArizonaScanner (2013 — 2016)
Date: 2015-03-30 05:56:07 UTC
From: ja moran
Topic: 18575 Message: 18576

I have a Uniden BC436HP with a GPS attached and love it. using hte GPS it tunes in frequencies in the area I am in. I drive from Southeastern Arizona up to Phoenix every week and don't have to do anything, The radio automatically picks up the Phoenix frequencies when in Maricopa county and hte Cochise frequencies in southeastern Arizona. the sensitivity seems to be good too.

I used the radio at the Daytona 500 along with my David Clark headset I use for flying.. Hey I can get use out of the headset when I am not flying. Piloting a plane is an expensive hobby and something I wish I could do more often but dont have threes that grow

I just looked at the Radio Reference entry tor Tucson. They have all of Tucson Police's regions lumped together in one group whose location is set as the entire county. This is the default if someone hasn’t gone in there to fix it because it should only cover Tucson city limits. If the regions were further broken up you could have them geotagged so that they cover just the area that the region covers (Phoenix Police is done this way). That means that as long as you’re in Pima County a location-based scanner will scan all of those regions.

You can do a hold just like any other scanner with the HomePatrol. It actually goes even further because you can, in this case, hold on Tucson Police Talkgroups instead of an individual talkgroup and it will scan only Tucson Police.

Please post the link at Amazon that has a new HomePatrol-2 for $92 because that seems like a scam to me.

Hi Lloyd,

So which one did you order?

Now that I have learned that the BCD325P2 is a successor to the BCD396XT, that’s the one I’ll be ordering. Bearcat Warehouse is expecting them tomorrow, ~ $395. I have always liked the BCD246, BCD396 & BCD996 series, and I’m not impressed with the operational ease of the Home Patrol-1, so I'm rather certain that I’ll be happier with the BCD325P2 than I would be with the BCD436HP. I ordered one from Amazon a few months ago. Someone had it before I received, and it looked like they tried to dig the SC card out of its slot with a screwdriver. Then I had a similar experience with a BCD536HP from Amazon, so they both went back. I buy a lot from Amazon, and much of it comes from the Phx DC. That’s the only two times I’ve had bad experiences like that.

> I just looked at the Radio Reference entry tor Tucson. They have all of Tucson Police's regions lumped together in one group whose location is set as the entire county. This is the default if someone hasn’t gone in there to fix it because it should only cover Tucson city limits. If the regions were further broken up you could have them geotagged so that they cover just the area that the region covers (Phoenix Police is done this way). That means that as long as you’re in Pima County a location-based scanner will scan all of those regions.
>
> You can do a hold just like any other scanner with the HomePatrol. It actually goes even further because you can, in this case, hold on Tucson Police Talkgroups instead of an individual talkgroup and it will scan only Tucson Police.

Hi Tom,

My suggestion is to download the trial version of the ARC-XT software, set aside a few hours and decide that you will get your head wrapped around this thing. I think you’d be able to better visualize what the scanner expects from you when you can see examples spread out on screen. I could send you my somewhat dated but still very usable file for that app, which would help you see the possibilities that the ADMS file structure affords.

Cheers,

Dennis KD7CAC

I've not heard the term specifically used on the air but DPS now has an officer in ADOT's Traffic Operations Center during peak traffic hours.

It's a three year program where an on duty DPS officer is in the TOC to use the cameras to verify incidents, determine the need for resources hopefully resulting in the scenes being cleared quicker. HPTOC makes sense as a call sign.

But then, I've been known to be completely out of touch at times.

I installed 4 NMO antannas in both my 2004 F-150 and my 2013 F-150

what I did was build a rail out of aluminum angle iron then evenly space the 3/4 holes. I used a dremel to clean out the holes.

I buy the antennas from Talley they have great service I mounted the rail behind the cab so I would not have to drill any holes in the cab.
when I routed the coax, I left a loop zip tied to the frame rail incase the bed needed to be raised... four antannas because I have different radios and different wavelengths

18595. Online Petition for HR 1301 - Ham Antenna Protection Bill

Yahoo group: ArizonaScanner (2013 — 2016)
Date: 2015-04-10 17:34:01 UTC
From: mark.schroeder@...
Topic: 18595 Message: 18595

I've started the petition "U.S. House of Representatives: Support and Pass HR 1301, The Amateur Radio Parity Act" and need your help to get it off the ground.

Will you take 30 seconds to sign it right now? Here's the link:
http://www.change.org/p/u-s-house-of-representatives-support-and-pass-hr-1301-the-amateur-radio-parity-act http://email.change.org/mpss/c/ogA/SCE/t.1m1/s0irlG1_Rsivt2-emRwHdA/h5/W9oZwjoGX5ulRlet7FB-2BvJ7X5SqwFZUqfdO2oQ09Zsxs6PdAO7wDf7B2q5euS9ZPI-2B-2FaGvWxSO7LSKoyGyNXzD5ovCLgAF9R7xE2s-2BVTj2ZUuXS-2B7wTSe4NGnLdyateJemSEz8A3qw-2BIFBYFlmhfhLKdP0RhF2swcKxKMp-2BZmVNHe5Ss9sEoj6XImug6doMJhZr-2BxepV4BNCHP-2B-2Bm7blgtR7-2BtT-2Fs2LNLtHn8vjLPLE-3D

Here's why it's important:

The measure would direct the FCC to extend its rules relating to reasonable accommodation of Amateur Service communications to private land use restrictions. As it stands now, only commercial wireless systems are allowed full protection under federal regulations. As has been shown over and over again, worldwide, when disasters happen, amateur radio volunteers are always able to provide immediate, localized communications needs, without dependenies on operational commercial infrastructure for public safety needs and for public service. Upon approval, we would need thesupport of the Senate and our President. By passing this, it is of no cost to the public and it enhances the protection and security of all US citizens.

Thanks,

>Mark Schroeder, W7KHZ<

18596. Free Scanners For The Taking - Fountain Hills Pickup

Yahoo group: ArizonaScanner (2013 — 2016)
Date: 2015-04-11 23:58:30 UTC
From: dand911phx@...
Topic: 18596 Message: 18596

Hi folks;

I'm leaving the valley shortly and have available some older scanners to give away, FREE, to any scannist or would-be enthusiast who wants them.

DO NOT REPLY HERE TO THIS POST -- I'm so busy that I probably won't see your reply, and besides, that is just so much flotsam for the other members of the group. If you want to you, may email me directly at DanD911Phx=at=yahoo.com (replace =at= with @).

Important Note: NONE of these radios will scan the most modern APCO-P25 P1 or P2 systems like Phoenix Regional Wireless Cooperative for Police Departments like Phoenix/Tempe/Chandler/Scottsdale/Peoria/Glendale/Mesa/Gilbert/Apache Junction and the fire departments that are dispatched by Phoenix Regional Fire Dispatch.
Two of the radios (the 796D and the 785D) WILL trunk follow the 3600-baud control channel for the Maricopa County System, and have the additional hardware to decode P25 audio as used by MCSO talkgroups on the system as well all analog talk groups such as the jails, Rabies and Animal Control, Adult and Juvenile Probation, etc.

All four radios will receive analog conventional channels like Rural Metro Fire, Phoenix Fire VHF channels if still in use, DPS/Highway Patrol, , and have wall-warts for 110-V operation and also will operate mobile on 12VDC power.
Uniden BC796D - http://wiki.radioreference.com/index.php/BC796D
http://wiki.radioreference.com/index.php/BC796D Uniden BC785D -
http://wiki.radioreference.com/index.php/BC785D
http://wiki.radioreference.com/index.php/BC785D with BCi 25D digital card Uniden BC885XLT
Radio Shack PRO-2035 - http://wiki.radioreference.com/index.php/Pro-2035_Pro-2042
http://wiki.radioreference.com/index.php/Pro-2035_Pro-2042
with OptoScan 535 http://www.tuck.ws/n8qt/pro2035/os535.htm add-on for computer control (sorry, I don't have the computer portion)
It's first-come, first-served for any and all the radios. If you'd like to confirm that the radios are still available before driving here, you may call (480)-816-0410 --- and if we don't answer, you must leave voice mail - because of pests, we frequently don't answer the call if we don't recognize the number. Pickup must be done at 15547 E Thistle Dr, Fountain Hills AZ 85268. Thistle runs south off of Palisades Blvd, just west of El Lago.

Directions from Shea Blvd (coming from SR87/Beeline or from Scottsdale). Turn NORTH at Palisades Blvd (stop light at the top of a hill overlooking the valley). Go exactly two miles. Turn right on Thistle Dr. The house is exactly 4-tenths of a mile, on the right. Steep driveway, numbers on the curb and on the black mailbox.

The radios must be picked up no later than midnight Sunday April 19, 2015. After that, any left over go to Good Will.

Dan Danz (WA5SKM)
Fountain Hills AZ

18607. What's this FD CAD designation?

Yahoo group: ArizonaScanner (2013 — 2016)
Date: 2015-05-04 02:59:24 UTC
From: Craig 'Lumpy' Lemke
Topic: 18607 Message: 18607

On the PHX FD CAD system, it often lists units like
DPS004 or MCSO04.

Does that indicate the number of those units on scene?
ie 4 DPS units or 4 MCSO units?

Also what is an FD unit with a + after it?
ie E21+ or LT157+ ?

Updated list of fire CAD unit designations anywhere?
What's a T vs a L? Truck vs Ladder?
What's the difference in a LADDER and a LADDER TENDER?
What's a Squad vs a Rescue? Squad is some kind of
heavy rescue?

Thanks-

Lumpy

From: Dan Danz
Topic: 18607 Message: 18608

I suspect its more like the number of the console that assigned the unit. At MCSO, we had DPS or PPD or RMFD, etc. without having multiples, so if one operator assigned that unit to an incident the other dispatchers couldn't use it for one of their incidents. I admit, I don't know the exact rules for PFD's numbering. They COULD just take the next one unassigned.

For dispatchers and other units involved it's a quick way of glancing at the screen to see if the other agencies have been notified, or are enroute, or already on scene without having to read details of the call.

For the details of the units, I seem to remember that there was a link on the CAD dispatch page on the web that took you to a page that explained units, and another that explained the colors and symbols that are used to track the state of a unit, which can be things like Dispatched, Acknowledged assignment, Enroute to Scene, On Scene, Transporting (to hospital), at Hospital, AOR (available on radio -- e.g. going for groceries), AOI (available on incident) for low priority calls, AIQ (available in quarters), etc.

18609. RE: [ArizonaScanner.com] What's this FD CAD designation?

Yahoo group: ArizonaScanner (2013 — 2016)
Date: 2015-05-04 16:01:00 UTC
From: Ed (K9EDK)
Topic: 18607 Message: 18609

The number after DPS or PHXP or MCSO, etc., is just a random number. CAD cannot process 2 units with the same ID, so for such things as police departments, APS, SRP, etc., a random number or letter is added after the ID to differentiate them. It has absolutely nothing to do with anything else.

Ed

View on www.angelfire.com http://www.angelfire.com/az2/chucksfirepics2/
Preview by Yahoo

A "T" is a tanker (water tender) An "L" is a ladder. A ladder tender carries most of the same equipment as the big ladder, minus the aerial and has fewer ground ladders. They're cheaper to run, and save wear and tear on the more expensive big ladder.

A rescue is a fire department ambulance that is staffed by firefighters. (All firefighters are at least EMT-Basic. Many go on to become EMT-Paramedic certified.) A fire department medic unit (Sun City West, for example) is staffed by EMT's/paramedics who are not trained as fire fighters.

A squad is a heavy rescue type unit with haz-mat and TRT equipment. They also carry EMS and structure firefighting equipment. However, Squad 19 at Sky Harbor is a brush truck-type vehicle that responds to incidents inside the parking structures where the engine can't go.

Craig, although lengthy, this should help you. I'd be happy to provide any apparatus pictures for reference.

This is not meant to steal the thread from Ed or anyone else, but here is more information that may be useful. This is not a complete list and I am sure others can contribute as well.

Phoenix area fire dept numbering system - https://www.phoenix.gov/firesite/Documents/094635.pdf

Here is a brief explanation of apparatus in Phoenix and around the area. There are WAY TOO many to explain each and every one you will see on the live incident page.

E – Engine (In Phoenix a 900 series unit is a adaptive response engine Co.) https://www.phoenix.gov/firesite/Documents/074792.pdf

L – Ladder

LT – Ladder Tender https://www.phoenix.gov/firesite/Documents/074793.pdf

SQ – squad (Heavy rescue) part of the statewide UASI program - also responds to fires, EMS calls, accidents locally

· There is also Squad 19 – this is a small brush truck type vehicle that is low in height that responds all around Sky Harbor including into the parking garages.

ST – Squad Tender small version of the large squad

BR – Brush

T – Water Tanker

R – Rescue (ambulance) are also FF’s

H – Hose wagon

BC – Battalion Chief

CV – Command Van/vehicle

CRV – Command Response Vehicle – Command Van/vehicle

C – Car (can be any type of staff vehicle) Safety officers are also Car 957S (South) & Car957N (North)

PIO – Public Information Officer (does respond code 3 to incidents when dispatched)

FI – Fire investigator

EDC – East Deputy Chief (Mesa Fire Battalion Chief – formerly BC201)

WDC – West Deputy Chief (Glendale Battalion Chief)

MC – Medic Cart (small John Deere or golf cart type light vehicle)

HM – Hazmat

U – Utility (light/air)

RH – Rehab large vehicle providing A/C, shade, cool drinks especially in summer hot months

CANT – Canteen

VENT – small truck with large fan on back capable of ventilating a large building such as a warehouse quickly

HR – High Rise

S – Support (technical rescue support)

F – Foam (Airport foam/crash truck)

· There is also Foam-34 & Foam-44. These are structural foam firefighting vehicles.

AT – Attack (airport foam/crash truck) crew also staffs Squad 19.

AS – Air Stair (stair truck at airport)

M – medic (usually applies to a rescue/ambulance personnel that are not FF's)

CR – Crisis Response (community Assistance Program) https://www.phoenix.gov/firesite/Documents/074836.pdf

R – Ranger 41 (DPS helicopter assigned to Fire Station 41)

H – Halo (AirEvac helicopter at Glendale Airport)

E – AirEvac helicopter

SWG – Southwest Gas (gas utility company)

APS – Arizona Public Service (electric utility company)

P – PMT ambulance – for those cities that contract with them. Some Tempe & Chandler stations have the private ambulance assigned to the station

A – Southwest Ambulance

SWA – Southwest Ambulance

FB – Fireboat (yes there are 2 fireboats in the Phoenix area) FB271 for Tempe Town Lake & FB199 for Lake Pleasant

· Lake Havasu City & Buckskin also have them as well.

DB – this is the designation for the Rescue (ambulance) assigned during a Diamondbacks baseball game. Usually DB1

BT – Bike Team

Some fire depts. have a designation for their vehicle only different than other depts.

SI – Special Incident (Tempe Fire)

SS – Scene Support (light/air unit – Tempe Fire) Mesa possibly using this for one of theirs as well.

From: Ed (K9EDK)
Topic: 18613 Message: 18615

Just a couple corrections, David.

SWA and PMT are the CAD designations for SW Amb and PMT Amb when a “dummy” unit is assigned as a place holder until an actual unit is assigned. Once the unit is assigned, the CAD designation will change to W-??? and P-???, whereas, if unit 123 were assigned, it would be either W-123 or P-123.

A – Ambulance. It could be staffed by FFs or Private ambulance company personnel. It’s typically used to designate a Fire Dept. ambulance, but not always.

M – Medic. Usually a training unit, training paramedics, but some departments use medic trucks on a regular basis.

CP – Community Paramedic. This is something new, but it’s pretty much a medic truck with 2 paramedics onboard, but one that does not transport. This is a Chandler thing.

You listed APS and SWG, don’t forget SRP. There are also a ton of other agencies that can be added, such as child protective services, etc. There are too many to list. Just apply a little common sense and you’ll probably be pretty close.

There’s also a SDC, South Deputy Chief. I believe it’s a Buckeye gig.

SS274 is pretty much the same as a Utility Truck in most other cities with a couple slight variances.

Been out of this for some time and have forgotten more than I thought. I am trying to program a 386XT with the RWC system to monitor Phx Fire , Phx PD and a few west valley PD's that are on the system. My question is what sites do I need to use for each group? For example I believe PhxPD is mainly using Simulcast A?

Ed,

Although I put in more description than necessary, less is better. I am aware that SS274 has other capabilities, but for the most part its a light/air truck.

As I stated in the first paragraph, it was not meant as a complete list. Although I don't use SRP, I know they exist, just accidentally left them off the list.

I just learned after the list that the new unit in Chandler was called Community Paramedic.

As far as Southwest, its the way it was explained to me by the Sun City West Fire Chief, but may not be that way anymore.

Last time I was in Buckeye, they said the SWDC was going away. I had assumed they had already.

18618. Re: [ArizonaScanner.com] Re: Whats this FD CAD desination

Yahoo group: ArizonaScanner (2013 — 2016)
Date: 2015-05-07 15:47:47 UTC
From: Dan Rollman
Topic: 18617 Message: 18618

http://www.iaff.org/Paramedicine/CHSDM.pdf is a presentation Chandler did on the Community Paramedicine concept. It is not a new concept, but only in the last few years has it picked up a lot of attention.

Pretty novel concept. Yet another good response to the notion that our municipal fire departments were originally built to fight fires, and have sort of morphed into being mostly medical services. If we were building the whole concept of a service to address medical crises in the field from the ground up, and we ignored the fact that we already have firefighters, fire stations, fire trucks, ambulances, ERs, etc., the system would probably look pretty different than where we are in the US currently. So kudos to the segments of the fire/ems community that are constantly trying to adapt to better and more efficiently meet the needs of its customers.

18619. Robot Phx FD A1 and CAD questions

Yahoo group: ArizonaScanner (2013 — 2016)
Date: 2015-05-07 21:30:12 UTC
From: azintrepid@...
Topic: 18617 Message: 18619

Can someone tell me anything about the robot sounding dispatch on Phx FD A1. Does someone type the info and then push a button and the computer sends it out? It ends with payback 7.

What does payback 7 mean?

And, what does CAD mean that is being mentioned in these later posts?

Thank you,
Dennis
Fountain Hills

18620. Re: [ArizonaScanner.com] Re: Whats this FD CAD desination

Topic: 18617 Message: 18620

Have they started re designating vehicle borne water delivery as "Tenders" here? Elsewhere "Tankers" fly, "Tenders" drive...

I think you're hearing "K Deck 7" not "payback 7". That's a channel designator.

CAD stands for computer-aided dispatch.

18623. Re: Robot Phx FD A1 and CAD questions

Yahoo group: ArizonaScanner (2013 — 2016)
Date: 2015-05-07 22:36:20 UTC
From: danrollman@...
Topic: 18617 Message: 18623

You're probably hearing it say "A Deck 7," which is VHF Channel 7 (154.145).

CAD means Computer Aided Dispatch.

Dan

18627. Police Codes

Yahoo group: ArizonaScanner (2013 — 2016)
Date: 2015-05-22 04:16:36 UTC
From: azintrepid@...
Topic: 18627 Message: 18627

Where can I get a good list of the different police codes. I have the Scannerstuff frequency Directory, but I'm not finding all the codes that I hear on my scanner.

18628. Re: [ArizonaScanner.com] Police Codes

Yahoo group: ArizonaScanner (2013 — 2016)
Date: 2015-05-22 09:46:02 UTC
From: ja moran
Topic: 18627 Message: 18628

the code can differ by agency\ATL = attempt to locate211 armed robbery 10-6 busy10-7 out of service (also could mean something is dead)10-8 in service19 i(or 10-19) is enroute to....someplace
20 is location21 is phone call or telephone
10-42 for DPS means officer at home while for other agencies it means person in custody10-15 is the DPS version of person in custody692 seems to be universal for drunk driver because that is the law or statue number 28-692693 wreckless driver as in 28-603 though 390 can be used for drunk and 390d for drunk driver901 is often a person or body and 901H a homicide or dead body926 is common for tow truck
97 seems universal for arrived on scene and 98 for left the scene27 28 and 29 are universal for license vehicle registration and wanted check961 crash no injuries962 crash injuries963 fatal crash

some agencies are more apt to use codes for almost everything while others will often just say something like there are cows in the roadway at Mile X on highway Y The problem with agencies and codes is if Agency A and Agency B are working a scene together and their codes for something are different that causes confusion. I have heard the Border patrol, Sheriff, and Highway patrol or DPS all working a case or issue together. When they have had the big fires in southern Arizona 9and ther is one now) all three agencies often work together and may be on a common frequency technology is nice when it works! ---

Where are you located? The codes are pretty basic as you have discovered, but many departments do have small changes or varieties. Not sure I can help but maybe I can come up with some of those changes that are out there.

That information is on RadioReference.com
http://www.radioreference.com/apps/db/?sid=2082&opt=all_tg#tgs
http://www.radioreference.com/apps/db/?sid=2082&opt=all_tg#tgs.

Use the frequencies for site 001 - the Mesa Simulcast site. The other sites are intellipeaters/fill-in sites that carry a talk group only if there is a unit that has affiliated with the site.

18635. For Sale 2 Uniden Trunktrackers

Yahoo group: ArizonaScanner (2013 — 2016)
Date: 2015-06-04 07:07:59 UTC
From: ftlaud_dj@...
Topic: 18635 Message: 18635

I am pleased to offer a couple of new in box Uniden scanners for sale to anyone interested.

I have 1 each BCT15X and BCD996XT both are new in box, have never been used at all! I originally purchased these units for the intention of setting up a scanner station but the project never got off the ground, at this point I'm going to cut my losses so the units are up for grabs.

Unit 1: BCT15X as stated new in box will sell for $ 125 no OBO
Unit 2: BCD996XT as state new in box will sell for $ 295 no OBO
Both units can be sold together for $ 400 even.

Local Phoenix Metro only, not going to ship, cash or cashiers checks only, contact me via direct email and we'll work out logistics.

Thanks,
Miguel

18638. Kearny River Fire Observations - 19 June 2015

Yahoo group: ArizonaScanner (2013 — 2016)
Date: 2015-06-20 07:27:18 UTC
From: flano@...
Topic: 18638 Message: 18638

Here is the tech data from today’s observations:

Frequencies:

123.125MHz - Air-to-Air; Air Attack-4QS, HT-740, DPS Ranger-58

151.175MHz - ASFD - TAC-5

151.415MHz - ASFD Fire

154.935MHz - Flight Following; Air Attack-4QS

159.240MHz - ASFD - TAC-3

159.285MHz - ASFD - TAC-4

159.330MHz - ASFD - TAC-1

159.450MHz - ASFD - TAC-2

163.100MHz - Helicopter "Deck"; Ranger-58, Heli-Base

166.675MHz - Air-to-Ground, Air Attack-4QS, Ranger-58

169.150MHz - Simulcast of 123.125mhz

Participants:

Heli-Tanker-740 - Returned to Marana

Air Attack-4QS - Returned to Marana (Last shift on this fire)

DPS Ranger-58 - Returned to Heli Deck at Kearny High School

Globe Crew

Unidentified Railroad Train - aka "Water Train"

Comments:

HT-740 laid out retardent lines.

Ranger-58 conducted water bucket work against fire hot-spots.

The Water Train fought the fire with hoses against several piles of railroad ties on fire, located near the tunnel.

SEATs are launching at 7am on the 20th.

Base Camp, aka Fire Camp, is located at the Kearny High School

Thanks,

FLANO

I have a Home Patrol 2. It's fine. Not great. My 536 and 436 both seem to have much better sensitivity. And of course none of the consumer-grade scanners work all that well on the RWC simulcasts.

Will likely sell my HP2 and use that money toward yet another 536 (or try out the new Whistler).

Hi Jeff,

You’re supposed to ask first, hi, not after you buy.

I’d have sold you my HP 1 with Extreme SW for a song.

I recently bought the BCD436HP, but it is almost too HP like.

If you just want to turn a scanner on and scan everything in your listening range, OK, but I’ve found that means you’ll actually hear little, because it too busy looking through hundreds of inactive possibilities.

I’m not saying they aren’t good, it’s just that they are a pain to get to just what you may want to listen in on at a given moment.

My BCD396XT is still my favorite.

Pamplet in the box says there simminal software or what ever will boot up when the plug is in. Hasn't happened.

I guess I will have to download manually. Also the range doesn't seem to work. It is even scanning the Yuma stuff and I am in Phoenix. set 10m range.

It’s getting the range from Radio Reference. People have to contribute locations and ranges for all of the submitted data. I submit the location data with everything that I submit and I have corrected numerous entries when I have the time.

Scanning the Yuma trunked system isn’t all that bad. They carry a simulcast of DPS for even the Phoenix metropolitan area.

Also, you can lock on either a system, department or frequency/talkgroup by just touching the appropriate area on the screen when you want to hold on something.

The system may be titled "Yuma", but it actually has several sites around the Phoenix Valley that carries DPS Metro and other state agency traffic, so it makes good sense that it should be within the Phoenix listening area on your HP2. The "Yuma" system even has sites in Cochise County.

Sometimes, RR and the Uniden scanners are more "right" than we realize.

I have one and the GPS and love it... when in Cochise county it picks up the channels there then as I come north it gets the Phoenix and maricopa county stuff... sensitivity is good too it picks up the luke ATIS when you are at 51 ave and Pecos road or the SV atis when you are at I-10 and Dragoon road.

  Hello Does anyone have the Home Patrol 2 scanner? I just picked one up at HRO today... Any comments? Advise? I also bought the GPS cord... JeffW0NWA

The 'Yuma' system is the central controller being used for ALL the DPS and ADOT trunked operations in southern Arizona.

At some point, ADOT is supposed to buy a controller for the state, but as far as I know, it hasn't happened yet.

Hello, everyone. Comcast is discontinuing personal web pages and all files will be deleted on October 8th. If you want any files from the archives, download them soon:
http://home.comcast.net/~gmitch86/archive/archive.htm

I put up another site here:
http://fccgrants.x10host.com/quick.htm
Since this is a free web hosting site, I will probably only put up a few weeks of past grants. I am also going to put a backup site here:
http://fccgrants.neocities.org/quick.htm

If you have a website with Comcast, you are going to have to figure out what to do with it.

18658. Trouble picking up Scottsdale PD on Home Patrol

Yahoo group: ArizonaScanner (2013 — 2016)
Date: 2015-08-08 17:03:58 UTC
From: danstrow@...
Topic: 18658 Message: 18658

Hello,
Using Home Patrol Sentinel software I have programmed in a “favorite” with Scottsdale Police and "Thompson Peak High" Simulcast but I am only able to pick up A02 North Dispatch (TG 3402). I would like to hear more Scottsdale Police talk groups if possible. Are there other unencrypted talk groups with traffic, such as South Dispatch (TG 3401)? If so, how do I get those?

Are they running on other Simulcasts that I should set up? I have experimented with others and am not picking up anything.

Alternatively I’m wondering if my antenna and location is the issue. I am right at the base of the west side of Thompson Peak (2.4 unobstructed miles from the towers). I am using an aftermarket 800Mhz antenna that is marginally better than the stock one. My house is encased in chicken-wire stucco like many others. Would I benefit from a 700/800Mhz yagi in the attic connected via a short run of LMR400?

Thank you,
Dan

Program Simulcast H. This carries all the Scottsdale talkgroups. The Thompson peak site is an overlay site, and only carries A02 North and a few other talkgroups.

Simulcast H:

Joe,
Thanks for the help. I programmed that in and am getting no traffic at all for hours. I'm assuming that my antenna setup (or lack of it) is a problem. I'll take the scanner for a walk and get up on a hill to see if that helps. If so I'll move forward with a better "base" antenna here in the house. The only thing that puzzles me is that it looks like I am practically in the center of the Simulcast H circle so would think there would be enough signal to pick it up even indoors. Thanks again.

Hello there Robert,

I'd be really curious as to why the flash pattern on that tower changes from day to day as I've never seen anything like it and have watched that hill for 20 years. Why also is the strobe at mid-tower instead of on top? Nevermind that though, please do watch it every night and see the different patterns.

I'm happy to report that I have been able to get several other unencrypted talk groups including southern dispatch when I move the unit to different parts of the house. UHF frequencies are highly susceptible to weather variation I'm learning especially during the summer. Some days are better than others. The 440 megahertz frequencies I monitor on my ham radio base station are noticeably affected especially during the summer so 700/800 must be even worse.

When it cools off I am going to run a high gain directional antenna up in the attic so there is less variability.

Thanks for the replies.

I was receiving a medical helicopter on 451.900R last night in San Tan Valley. It seems to be an LTR system, perhaps Com Rent. Anyone know what helicopter uses this? I don't think it's Native Air as they still are on their conventional UHF freq.

18675. ULS outage

Yahoo group: ArizonaScanner (2013 — 2016)
Date: 2015-09-02 03:03:29 UTC
From: Jeff Daugherty
Topic: 18675 Message: 18675

The FCC Universal Licensing System (ULS) and other FCC website public applications are down for maintenance and will be unavailable from 2200 UTC on Wednesday, September 2, until 1200 UTC on Tuesday, September 8. The outage also will affect the Electronic Comment Filing System (ECFS) and the Electronic Document Management System (EDOCS).

During the ULS outage, it will not be possible to file any Amateur Radio applications, including examination session documents, or conduct any license or application searches. Also, while the requirement to pay a regulatory fee for Amateur Radio vanity call sign applications will end on September 3, prospective vanity applicants now will have to wait until after 1200 UTC on September 8 to file an application for an available call sign.

The FCC has told ARRL that the approximately 18-day vanity call sign waiting period will remain in place "for now."

The FCC's August 20 Public Notice has complete details on the planned maintenance outage. It can be found on the web at, https://www.fcc.gov/document/fcc-databases-unavailable-filing-deadline-extensions-early-september
.

That makes sense that it is Native Air. So I hear them on 464.025R 136.5 CTCSS. But even with the tone on that frequency, it sounds like an LTR system keying up on the channel, too.

Do you have info on the LTR system for the 451.900 channel? I'd love to program the LTR system in my scanner, possibly with the talkgroups for Native Air, too, if you know them.

Also, is Air Evac using anything? They seem to have a number of copters throughout the region.

I have managed to solve the TOPAZ issue but I do have a question for the group,I've noticed a new presence in the metro Valley and around AZ (American Medical Response).which I did read not long ago they have gained permission to operate in AZ. I know there massive in California,Oregon,Washington and Hawaii and in pretty sure I've seen them in a few other states. I was looking around RR For there AZ frequencies. Butt have yet to find anything. Has anyone else stumbled across them?

Someone just mentioned that the T OPAZ system has rebanded so you’ll need to reenter the frequencies used for trunking.

Strictly the red colored control channels,then the blue secondary channels exactly in sequence as listed. At first it didn't seem like the scanner took it. Then a little while later driving around mesa,Gilbert area everything went live. So I'm happy.not an easy process though on the BCD536HP.ALOT More complicated than your older domestic scanners.

FYI, if you download an update to your database for any of your scanners via RadioReference, and it doesn't pull the current information in the database, you will have to edit the scanner by hand for that instance.

Updates for the Uniden, GRE, RS, and Whistler radios are compiled and release once a week. It may be possible, that even though we have updated the database in RadioReference, it is in between updates for your specific radio.

Each database update release is done on different days and times. For the life of me, I can't recall what they are :)

I like the UNIDEN HP (Home Patrol) ones MIne is connected to a GPS and it knows what frequencies to listen to.. took the radio to Charlotte for the NASCAR race and rode the AMTRAK train, the radio tuned into the frequencies used for the area I was in... you can also enter a zip code if you are not using a GPS
I take AMTRAK because ther is NO TSA nonsesne just show the conductor your ticket and ID and get on board....

better yet couple a GPS to this fine radio and it automatically figures out where you are and what to listen to
I drive between Chandler (Maricopa County) , through pinal and pima county to near Willcox in Cochise county
the scanner is busy in Maricopa county but not all that busy in cochise county.... and probably not so busy out west.. you may also hear the california frequencies. CHP was on 42mhz frequencies while san bernardino and riverside counties in california had an 800 mhz system.. the 800mhz needs repeaters to covere a vast area or be heard better in rough (hills or mountians) areas

I've gone into the RR database and manually entered what I was looking for. There isn't even a listing for Quartzite PD. I've been using the RR database for about 10 years so I'm familiar with using it. Hoping to find someone actually listening to the freqs currently. All I find with a Google search is conventional freqs but somewhere I read they might have joined the Yuma trunked system but searching that database doesn't show anything.

If you have a BCD436HP you should just be able to put in your location and have the scanner do the work for you since it has the entire Radio Reference database in it.

Actually, the database is only as good as who updated it and when it was last updated. I input the zip code and listened for 2 days and never did hear any law enforcement other than the highway patrol. I am hoping to hear from someone that actually listens to the frequencies currently.

You came to the right place. Your scanner can get these frequency's.. I too don't remember if it takes a FREE software upgrade or not. But my 500/600's and Radio Shack's 106/197 all do just fine with these. As soon as you turn your scanner on, hit the "3" button. respond back with what appears on the screen.

18740. scanner recommendations?

Looking for scanner recommendations. I live in Anthem north of Phoenix. Interested in receiving Maricopa county (because we're east of I-17), Phoenix PD (because it's west of I-17 and in sight of my backyard), Phoenix and Daisy Mountain fire (same reasons) and DPS.

What would you recommend that can receive these? I suppose the ability to download from Radio Reference would be handy. I know of Uniden's Home Patrol and x96(?) radios. Any others? As always, cost is an issue. TIA

The Uniden x36 series, or the xP2 series, or the Home Patrols would all work. Several of Whistlers, and Radio Shacks equivalents, models will also work. Be sure to look for a model capable of P25 Phase II, as it's rumored that the RWC will be going Phase II by the end of next year. Also, Maricopa County's New system that is in the licensing phase will most likely be Phase II when it gets up and running.

Although I do have some issues,here and there ,I BOUGHT THE BCD536HP About a year ago,it's preloaded U.S. wide it picks up everything and stuff other scanners won't including phase 2. Not easy to edit frequencies though.its a complicated process.butt by far,of all the scanners I've had going back 30 years,this 1 out performs anything I've ever seen. Expensive investment though butt it's worth it.

18744. Programming Scanners

Yahoo group: ArizonaScanner (2013 — 2016)
Date: 2015-11-17 03:49:05 UTC
From: <tomtodd6@...>
Topic: 18744 Message: 18744

I have an Uniden BCD 396XT and a Radioshack PRO-96. They are capable of receiving APCO-25. However I am at a loss trying to program them. If anyone will help me I am willing to pay $. I am particularly interested in monitoring east Mesa police (TG 3009). Humbly, Tom (Mesa)

I have the same radio. I use ARC396 program. It is easy to use. When I lived in the valley I was able to use it for all the P=25 freqs. ARC396 is made by BUTEL.

From: ja moran
Topic: 18584 Message: 18749

if you load in all the tower frequencies, the control channels and the other frequencies, the scanner should listen to EVERY talk group. it should show the talk group ID... you then can enter TG 3009 and associate that with a memo for what it is...
the nice thing about being in Cochise sounty in southeastern Arizona is DPS is on 460.325 for district 9 which includes cochise and graham counties.. cochise sheriff is also easy to get . a few frequencies are used for the entire county. the CBP is often encrypted but you will hear them on the sheriff fire or highway patrol frequencies....

once I get close to Maricopa county the three radios I have in my truck get more active.

From: Jon M. Hanson
Topic: 18754 Message: 18755

The Rio is trunked and is on Radio Reference.

I've never heard of Sun Coast before. They don't appear to be in Radio Reference and I can't find any licenses allocated to "Sun Coast" or "Suncoast" on the FCC's website. They appear to be a part of Boyd Gaming, which has a lot of licenses in Las Vegas. You'd have to go through each of these license entries and see if one is for the Suncoast: http://fjallfoss.fcc.gov/General_Menu_Reports/license_search_out.cfm?service_select=%25&accessible=NO&soundex_select=boyd&wild_select=on&state_select=NV&zip_select=&frn_select=&begin_grant_date=&end_grant_date=&begin_expiration_date=&end_expiration_date=&limit_select=4&sortstring=%2C+lic_name%2C+file_num.

The 123.xx are about the only ones still used for the purpose listed. DPS sucked up a number of the 45x.xx channels, plus the splinters in-between, and other agencies got the 15x.xx.

You should look at RadioReference.

WalterH

Good news is I got a Homepatrol-2 for Christmas. Bad news isit appears to be deaf as a rock.

I installed Sentinel and upgraded the database. After entering my Anthem zip code I let it scan. But it never stops on a frequency. I've several different antennas I have here with no change. I've tried listening to the weather channels with no luck. I even took it into the valley yesterday (resetting the zip code) and no dice.

I won't get back to HRO until Wednesday. Am I missing something with using it?

I’m not sure why this wouldn’t be the case but can you make sure at least one Service Type is turned on (on my HomePatrol-1 this is under the Main Menu and then “Select Service Types”)? They should all be on by default.

By default, several dispatch service types are turned on. While scanning RWC, Maricopa county and DPS go by so I should get something. I realize that transmissions aren't continuous but I should hear something during several hours of monitoring I would think.

On Sunday I was in 85023 so set the zip code to that. Still nothing and still couldn't receive even NOAA weather. Very strange.

I really like my HomePatrol-1. I didn’t think I would at first but the ability to have the entire Radio Reference database in there that can be narrowed down by location is much better than me trying to program a scanner with hundreds of frequencies manually when traveling somewhere. I use mine all the time.

I’m sure the HRO people will let you take the new one out of the box in the store and try it out before leaving the store especially since you don’t live close to the store. You should absolutely be able to hear NOAA channel 1 at their store so that would be a good thing to try.

From: jriechert@...
Topic: 18764 Message: 18772

Went to HRO to exchange the unit. The guys spent a lot of time trying to get it to work, comparing it to the demo on the shelf (which did work) and, finally, a new unit out of box. Eventually everyone agreed that mine was bad and gave me the new one. All is good now.

18773. setting up my new HP2 for Anthem

Yahoo group: ArizonaScanner (2013 — 2016)
Date: 2016-01-07 02:45:38 UTC
From: jriechert@...
Topic: 18773 Message: 18773

I'm starting with PD/FD dispatch for Anthem area.

1. So far I've figured out Phoenix PD district 200 so I think I'm good for now.

2. I know that I'm in MCSO district 4 but not sure how that maps to the areas shown in the HP DB. West county? Lakes? Which county site(s) cover Anthem? I haven't heard enough traffic yet to narrow it down.

3. This stretch of I-17 is covered by the DPS Prescott district. I might add in the central district to cover potential travel into the valley.

4. Daisy Mountain FD is dispatched by RWC. But it seems that I get all the FD dispatch calls that RWC sends out which, sometimes, seems almost continuous calls. Is there a way to limit to only DM FD?

Does the above make sense for starting out?

I believe the east/west dividing line for the sheriff is I-17. So Anthem would just be barely west. If you put your latitude and longitude in your range will be 0. This just means that the radio isn't going to do a range circle around your location. If you put in a zip code I think the range goes to 10 miles around the center of that zip code. The range is even larger if you put in a city. So whenever possible you should use your precise latitude and longitude so the scanner isn't trying to scan things far away from you. From where you're at you could probably do either the White Tanks site or Thompson Peak. Both sites carry all of the traffic all the time. Some of the other sites you'll see on Radio Reference are fill-in sites. The scanner will automatically scan all sites within range. Lakes should cover the entire county since the lakes are spread out over the entire county.

I don't know of a way to get only Daisy Mountain from the RWC dispatch. There are no different dispatch tones to narrow down who hears the dispatch. There must be some other mechanism so that every station isn't hearing every call (I'm sure someone on here is more knowledgable about that). Things happening in that part of the valley would be on K-6 (Talkgroup 1615) but that's just a "north" tactical channel so you'd still hear a lot of things outside of Daisy Mountain. Even then if things get busy they can put people on whatever channel they like so you wouldn't want to only listen to K-6.

Phoenix PD 200 A & B

MCSO East talkgroups. I would also add in the VTAC frequencies, as Sun City area deputies seem to like to use them for car-to-car chit chat. Anthem area deputies may do the same.

DPS Metro West covers I-17 north from the 101 freeway, as well as the 101 and 303 freeways in the West Valley. Metro Central covers I-17 south of the 101, as well as the 101 east from I-17 to Scottsdale Rd, and the 51 freeway.

I would include the 2 ADOT ALERT TG's from the YRCS trunk system. For incidents on the freeway system, you can get pretty accurate info as to closures from listening to them.

Add in TG 912 along with the MCSO TG's. This is MCDOT's REACT unit, and they assist with road closures on surface streets as ALERT does on the freeways.

Scanner listeners can't separate the various departments and districts dispatched by Phoenix alarm. We have to listen to all of them. Daisy Mtn is typically on fire channel A-10 (VHF) or K-7 on the RWC. I would add Black Canyon City FD as well, since Rescue 146 seems to respond to incidents with BCFD fairly regularly.

He's likely got all of those talkgroups already since the entire Radio Reference database is built in to the Home Patrol line. That's sometimes a problem since there is so much in the Radio Reference database but you can narrow down by what services you want to scan based on your location.

You will rarely ever hear MesaFD VHF Ch2 and higher any more since their migration to the Mrsa trunked system. I think they keep them active in case they meed to talk with RuralMetroFD but want to be on a Mesa frequency.

As Roy said, you will rarely hear anything on,the VHF channels other than ch. 1.

There was a mention over on radioreference.com that Mesa "might" do what Phoenix does, which is put fire and haz-mat calls on the VHF channels, and keep medical calls on the trunked system. At this point, unless someone can confirm it, it's only a rumor.

From: ja moran
Topic: 18786 Message: 18787

having issues with a Uniden BCD496HP... it's the scanner with the database on a SD card.
when I turn it on I get SD card access error then it says "Normal Charging" I have tried to connect the scanner to the laptop... I recently got a new laptop
I did download the Sentinal software

anyone else have this issue ?? what do I need to do to fix the problem....
My guess is the batteries died. When I turnthe unit off it always says "writing to SD card." now it won't read the SD card. I think the SD card is in the backsidis e of the unit under the batteries. I've only had that scanner for a little over a year....
Other than this iI like thjis radio. I've taken it on several AMTRAK trips and to several NASCAR races... I take AMTRAK when I can because there is no TSA nonsense you find at airports. the conductors and train staff do a good job of keeping order

Group,
I bought one of the cheap Noo Electric RTL2832U, model R820T radio dongles off of Amazon and got it hooked up to my PC last night. I was trying out the Unitrunker software to see if I could pick up Tempe PD. I also installed SDR# just to test it out and the reception seems good for local FM radio stations. But when I park it on a local FM radio frequency 107.9 Mhz in Unitrunker to test it out, the reception is very poor. Is this software just set up for the higher trunked band frequencies? Do you need 2 of them to do trunked scanning?

The reception might be poor on a broadcast FM station because of the bandwidth. Commercial broadcast would use a very wide signal. Unitrunker would setup for a pretty narrow bandwidth and would cause the signal to be distorted.

I think you'll find that your SDR device (and lots of others being sold in the $20-range) drifts considerably, especially during warmup. You'll find yourself having to monkey with the PPM correction quite often. I've had good luck with a better one from RTL-SDR.com that's much more stable. And, if you haven't been there yet, that site has good information about SDR radio in general, as well as a blog. There's a community for SDR on google+ as well.

If you want to use Unitrunker like a regular scanner, you'll need 2 dongles -- one to stay on the control channel and one to switch to whatever voice channel has been granted for the talkgroups that you want to follow.

You also need a virtual audio cable if you have anything other than analog voice to follow.

The setup is something like this:

Two SDR dongles, 1 setup on the control channel of UT, and the other as the voice receiver on UT. The output of the voice receiver can be directed to a speaker for analog talkgroups, but the output for the digital TG signal has to be piped to another program, DSD+, using the virtual audio cable. DSD+ decodes the digital audio (e.g. P25) and puts the audio output to the speaker.

However, you can get lots of information from UT with just one dongle monitoring the control channel. Setup UT to get system and talkgroup information from RadioReference.com so you're looking at more than numbers. Then be amazed at all the activity, and learn a lot about trunking systems, especially if you monitor a busy system, like the Regional Wireless system in Phoenix area. Using what you get from UT, you can then decide what to monitor with a conventional scanner.

I recently moved from Fountain Hills to Overland Park KS and went from knowing a whole lot about the systems in Phoenix to a noob here. UT, two dongles, and DSD+ have proved to be invaluable.

One thing that makes it easier is that nearly everybody in the area is on one P25 system with multiple (most simulcast) sites that really blanket the area, KCMetro MARRS <http://www.radioreference.com/apps/db/?sid=6916>. I'm listening to KCK(Kansas) and KCMO(Missouri) PD's, Fire Departments, 4 or more counties for the Sheriffs, local suburban PD's, and even metro area highway patrol dispatch (so I don't have to monitor the statewide Kansas or Missouri system unless I'm traveling). The neat thing is that for my home area, I only have to monitor one nearby tower, and I get Johnson County Sheriff, Overland Park, Olathe, Leawood, Lenexa, Prairie Village, Shawnee, metro KHP dispatch, and consolidated regional EMS/Fire dispatch.

Good luck.

From: zman_85283@...
Topic: 18470 Message: 18806

Group,
I just picked up a Home Patrol 1 last night and got it up and working. I'm in the Tempe area and was hoping to hear Tempe PD. I can hear the dispatch channel, but all others are quiet. Are they using encrypting?

Any thoughts on a good external antenna? The rubber duck antenna works okay, but an external antenna would be better.

Anyone else notice Uniden has gone to SMA connectors, instead of the old BNC?

Chris

18816. CHP frequencies

Yahoo group: ArizonaScanner (2013 — 2016)
Date: 2016-03-06 23:12:44 UTC
From: ja moran
Topic: 18815 Message: 18816

In Arizona when conditions are good you can hear the NM highway patrol or the CHP, California highway patrol..
I think they went to a P25 or digital transmission because I often gt hash noise on the CHP frequencies now...

With the Arizona Highway Patrol, easy to listen to, it makes it easy for a citizen with a scanner to helpful. I've heard dpatches where a motorist did not know where they were.. I passed the stranded motorist, then called the DPS dispatch with a good location. When they were looking for a vehicle that I hapened to see I called in the location...
I won't put myself in danger but will serve as an extra pair of eyes.

All CHP low band channels are analog. The new CHP extenders (handhelds)
are 700mhz P25 digital.

In some parts of California, the CHP is fully repeated, many areas are
still not repeated. It's very hard to hear the mobile units in those
areas unless you are close.

I hate to tell you this Craig but you won't hear the hot traffic frequencies or detectives as most cities, including Phoenix, have encrypted them. Some cities have the patrol frequencies in the clear but not all of them.

If it’s encrypted you’re not going to hear it, trunked or not. That’s the whole purpose of encrypting it.

18826. 7 FREE used scanners & 4 Freq Counters

Yahoo group: ArizonaScanner (2013 — 2016)
Date: 2016-03-20 23:40:09 UTC
From: Yah_hu
Topic: 18826 Message: 18826

Free to the right Phx-area home: The peak of my monitoring hobby was in multiple states from 1965-2000, with a little from Scottsdale in 2000-2008. You will need to pick up all items below in NE Scottsdale (Troon area near E Happy Valley and Alma School; think of the old "Greasewood Flat" location).

Radio Shack: Pro-91, Pro-37, Pro-83, two Pro-84's (NASCAR)
Optoelectronics Frequency Counters: Explorer, Digital Scout, two Scouts. (Some overheating, power supply issues as with many of the later Optoelectronics devices)
Sorry, but I am not going to list capabilities or bands, or operational info. This is for an old timer who knows or who can figure it out. For years I have intended to recycle these with old printers and faxes, but just could not bear "dumping" them. Multiple boxes of records including purchase receipts, user manuals and freq guides are long gone. Really old items from 1940-1995 are ALSO long gone (tunable monitors, attic antennas, cases of hundreds of crystals, crystal-controlled monitors, early programmable units, tubs of coax connectors, etc.).
If seriously interested, email is Jim L at yah_hu@... (there is an underscore between yah & hu).

The HomePatrol and other Location Based scanners use the location you set (by ZIP Code, city/state or GPS) as a center point on a virtual map. You set a Range, and that draws a big circle on that map from that center point.

Systems in the database also have a location on them as well as a range. These also draw a circle around the system's center point. If these circles meet up the system will be loaded into the radio. This explains why you get channels loaded that would appear to be from outside your listening area.

Two questions...

On Ch A1, the automated betsy sometimes says "SPECIAL CALL".
What is Special call?

On the online CAD, what is a (+) sign after a unit,
ie E31+ ?

18834. Re: [ArizonaScanner.com] What are these PHX FD designations?

Yahoo group: ArizonaScanner (2013 — 2016)
Date: 2016-04-07 02:56:25 UTC
From: Roy Schahrer
Topic: 18832 Message: 18834

When there is a 'Special Call' dispatched it indicates that command of an incident has requested units in addion to what was initially on the call. Usually it is to add a second rescue or another engine, but not enough usually for an addional call level like from a 3-1 to a 1st Alarm.

The + sign after a unit number indicates the unit is an ALS (Advanced Life Support) staffed unit. (2 paramedics I think.)

Yahoo group: ArizonaScanner (2013 — 2016)
Date: 2016-04-07 02:46:16 UTC
From: Richard Gaun
Topic: 18832 Message: 18836

A + next to the unit means it's a Paramedic Unit.

Special call is when a unit is added to a call that it was not originally dispatched to. Most often used to add a Rescue (Ambulance) to a medical call.

Here is the link to the CAD = https://htms.phoenix.gov/publicweb/

What you are hearing is AOI (Available On Incident) for snake removal calls. When the robot dispatcher reads, it sounds like ALI.

Tnx guys
Like the McDowell Rd sound.

On the subject of CAD -
What determines what is listed there?
There seems to be a lot more calls over the air on 154.900
than shown on the online CAD?

QTH is way out West and 154.190 signal varies from solid to almost inaudible.
I guess this due to multiple TX sites?
Each site transmits based on incident or unit location?

Tnx Kevin

Here is the disclaimer directly from PFDs webpage:

"The Phoenix Fire Department's internet posting does not provide a complete listing of all Fire/EMS incidents. It only contains basic public information involving fire and emergency incidents and omits incident reports involving information that is confidential by statute or common law privacy."

You will hear a difference in signal on Channel 1 because the CAD selects the proper site for the unit that is being dispatched: Station 28 from South Mountain, Station 7 from North Mountain, Station 241 from Far North. Scottsdale units are from several low level transmitters that are located at the stations. There is also a transmitter at White Tank that covers the western units including Tonopah, Buck and Buckeye Valley.

I may have missed some but that is off the top of my head.

18852. Scanner Help

Yahoo group: ArizonaScanner (2013 — 2016)
Date: 2016-05-27 21:41:06 UTC
From: benendow@...
Topic: 18852 Message: 18852

I work for KTVK/KPHO-TV. We have several scanners in our building to monitor PD, Fire, etc. Recently we have noticed that some of our scanners are missing calls. Is there a consultant that could came and look at our system and make some recommendations?

Thanks

Ben Endow

First question - are you using consumer-grade scanners in your professional environment? Why not use professional P25 trunked radio receivers like the Relm KNG-P800 (set to receive-only mode), or the Unication G4/G5 P25 receiver? You wouldn't use an iPhone 6 for routine live shots or a parrot drone in place of helicopter ENG would you? I'm puzzled why modern news stations still use $400 hobbyist scanner toys that "receive some transmissions here and there," especially on LSM simulcast P25 systems like Phoenix and Mesa.

Anyone have the frequencies for the new Desert Diamond Casino in the west valley...

18858. 263.125 Targeting exercise

Yahoo group: ArizonaScanner (2013 — 2016)
Date: 2016-05-29 19:15:46 UTC
From: Richard Carlson
Topic: 18858 Message: 18858

It sounds like a Goldwater Range targeting exercise right now (Sunday lunchtime) happening on 263.125.

This is a new to me channel and I couldn't find any other references to it.

I am presuming it to be a the Goldwater Range based on the traffic heard. I live some 60 miles or so north of there but they are coming in pretty clear. It could be from the MOA north of me however.

18860. Re: [ArizonaScanner.com] 263.125 Targeting exercise

263.125 is Luke's South Approach/Departure also referred to as "Local Channel 4". It's not common for them to use this for a training as it is primarily air traffic control.

Along those lines, I live in Tempe and I'm frustrated with the Tempe police encryption on almost every channel. Has anyone found any Digital Signal Decoder software that will break the encryption? How are the news agencies dealing with encryption? I currently have a Uniden Home Patrol that will pick up the un-encrypted traffic but want to hear what crime is going on my neighborhood, real time.

You can thank the press for some of the encryption.

If you remember, Phoenix PD patrol channels were all out in the open until the shooting incident near 16th St & Northern a couple years ago. When the shooter's identity was discovered and PD was on the way, the press rushed over to the guys house and was there before the PD. I think PPD encrypted B and C Decks about 3 days later to prevent the same thing from happening again.

I can understand that some traffic needs to be encrypted but it does suck that so much of it is these days.

The 996T is less and less capable of receiving the Phoenix system. Like Dan advises, a professional grade unit or at least the 996P2 is what is needed.

No one has confirmed their frequencies. Take a look at the license below. It is likely a MOTOTRBO system that is in use by the casino. You will need a scanner, radio, or SDR that is capable of monitoring DMR to receive if it is indeed MOTOTRBO.
http://www.radioreference.com/apps/db/?fccCallsign=WQWM244

It has also been reported that Tohono O'ODham Law Enforcement may be using talkgroup 4895 on the RWC. This is not confirmed.

"The 996T is less and less capable of receiving the Phoenix system. Like Dan advises, a professional grade unit or at least the 996P2 is what is needed."

What is the reason for this? I have a 996T. Do I need a new scanner now just to monitor PPD unencrypted talk groups?

If so, what's recommended? What is easiest to keep up to date, but still customizable?

Heard this morning (Saturday) as I drove thru the area from Prescott to Wickenburg:

163.100 (000.0) "Heli Base". BLM crews coordinating helicopter dips in the pond at the Hiddens Springs ranch in Peeples Valley. "Luke Lake" is a small crescent shaped pond right off of Hwy 89 the choppers were dipping in one right after another.

411.995 (R) "Air Tac". Sounded like chopper to chopper traffic.

159.955 Unknown fire crew working the line

155.400(R, 141.3) Yavapai County crews working on the "Union" Channel

155.160 Same Yavapai County crews using "County SAR", telling contact to go to the "Union" channel.

Rich

411.995 is likely 412.0000 or 411.9875 the Federal band is 12.5 Khz channel spacings.

and is either an IMAGE from the 460 range (depending on make/model scanner) or a UHF Link, but neither are standard NIFC allocations

Typo on my part, 411.975 is the correct freq. I wrote it that way in my field book as I was driving and didn't notice the error when typing.
